Postdoctoral Positions in Biophysics

The Brangwynne Lab at Princeton University is currently accepting postdoctoral fellow applications for several positions at the cutting edge of biological research.

We are a team of biologists, physicists, and engineers whose primary goal is to understand the rules governing self-assembly within the cytoplasm. But we have broad interests ranging from the development of new technologies, to questions on the role of disordered protein sequence motifs, non-equilibrium phase transitions, cell growth, transcriptional regulation and genome architecture.

We are looking for curious, hard working, and innovative scientists interested in working in an exciting interdisciplinary environment. Qualified candidates will have a strong background in quantitative biology, (bio)physics, (bio)engineering or related fields. Experience with techniques of molecular biology, cloning, instrumentation/device design (e.g. optics, microfabrication), light microscopy, and quantitative image analysis would be useful.
