The School of Engineering and Applied Science, The Atmospheric and Oceanic Sciences Program & The Geophysical Fluid Dynamics Laboratory invite you to the third Student and Postdoc Symposium on Fluid Dynamics & the Global Environment

Monday May 23, 2011 (starting at 8:45 A.M.)
Bowen Hall Auditorium (room 222)

The study of fluid dynamics is integral to both engineering and global earth systems. This workshop will bring together students and postdocs working on cutting-edge fluid dynamical research with a focus on environmental and geophysical applications. The goal is to enhance cross-disciplinary fertilization and bring engineering methods and models to bear on problems of geophysical relevance. Program at http://efm.princeton.edu/SEAS-GFDL-2011
