The Future of Children has released ten short papers that highlight conclusions about children and electronic media:

- Marketing and Media
- Media Violence, Aggression, and Fear
- Multimedia and Multitasking
- Parenting in a Media-Saturated World
- Teens and the Internet
- The Digital Divide
- The Power of Positive Marketing
- Toddlers and Television
- The Medium in Not the Message
- Media Mythbusters

Each of these two-page papers is based on research and policies highlighted in a Future of Children volume, Children and Electronic Media. The journal focuses on how common forms of electronic media influence the wellbeing of children and adolescents.

The volume concludes that media technology can be a positive force in the lives of children and youth. Parents and policy makers should focus on the quality of the content of the programs offered to children rather than worrying about the type of technology or media platforms that children use.

The Future of Children is a collaboration of the Woodrow Wilson School at Princeton University and the Brookings Institution.
