AMERICAN EXCEPTIONALISM AND HUMAN RIGHTS 341
Chapter 6
The Paradox of U.S. Human Rights Policy

ANDREW MORAVCSIK

American "exceptionalism" in international human rights policy—the U.S. aversion to formal acceptance and enforcement of international human rights norms—poses a paradox. The paradox lies in the curious tension between the consistent rejection of the application of international norms, on the one hand, and the venerable U.S. tradition of support for human rights, in the form of judicial enforcement of human rights at home and unilateral action to promote civil and political rights abroad. The United States has, after all, the oldest continuous constitutional tradition of judicial enforcement of a written bill of rights in the world today. Nowhere in the world are civil liberties more robustly debated and defended in public and in court. From support for revolutionary France in the first years of the republic to military intervention in Haiti during the 1990s, moreover, American politicians and citizens recognized the integral link between the spread of civil liberties abroad and the defense of American ideals and interests. U.S. efforts to enforce global human rights standards through rhetorical disapproval, foreign aid, sanctions, military intervention, and even multilateral negotiations are arguably more vigorous than those of any other country. The United States acts even where—

1 I gratefully acknowledge research assistance from Mark Copolovitch, Jonathan Crawford, Aron Fischer, James Perry, and Christopher Strawn; constructive criticism from Antonia Chayes, Stanley Hoffmann, Michu Ignatieff, Alex Keyssar, Harold Koh, Frank Michelman, Yanne Orenstein, Samantha Power, John Ruggie, Frederick Schauer, Anne-Marie Slaughter, Henry Steiner, two anonymous critics, and participants in colloquia at Harvard’s Carr Center for Human Rights, New York University, Princeton University, and Yale Law School. I acknowledge use of an unpublished paper by Helga Magge. I am grateful to the Weatherhead Center for International Affairs and the Human Rights Committee at Harvard University for research support. This paper draws on material introduced in Andrew Moravcsik, "Why Is U.S. Human Rights Policy So Unilateral?" in Multilateralism and U.S. Foreign Policy: The Cost of Acting Alone, ed. Stewart Patrick and Shepard Forman (Boulder, CO: Lynne Rienner, 2001).

2 For useful overviews of U.S. unilateral policies, see David Forsythe, "The United States, the United Nations, and Human Rights," in The United States and Multilateral Institutions: Patterns of Changing Instrumentality and Interest, ed. Margaret Karns and Karen Mingat (Winchester, MA: Unwin Hyman, 1999), 261–88. The United States is so active that some
as in Kosovo—the potential costs are high, and in some cases such leadership has been essential to the success of human rights enforcement. Levels of overall U.S. public support for international human rights policy, like support for multilateral commitments—and even popular views on issues like the death penalty—are not strikingly dissimilar to levels in other advanced industrial democracies. The United States is, finally, the home of the largest and most active community of nongovernmental organizations and foundations devoted to human rights promotion in the world today. Yet the United States stands nearly alone among Western democracies in that it fails to acknowledge and implement domestically the global system of interlocking multilateral human rights enforcement that has emerged and expanded since 1945. Phenomena referred to as American “exceptionalism,” noncompliance, nonadoption, and double standards can be seen as different versions of the same essential phenomenon, namely, an American unwillingness to impose on itself general international rules that the U.S. government accepts in principle as just. True, the United States has ratified one of the two UN Covenants, as well as conventions on political rights of women, genocide, slavery, forced labor, racial discrimination, and torture. It stands out, however, for not ratifying international instruments on discrimination against women (CEDAW), rights of the child, socioeconomic rights, and migrant workers, as well as the relevant regional document, the American Convention of Human Rights. This level of rejection is unique. The Convention on the Rights of the Child, for example, has been ratified by every UN member except the United States and nearly stateless Somalia. In the few cases where the United States does ratify human rights treaties, such as the Genocide Convention, it has done so only after a long delay and with greater substantive and procedural reservations than any other developed democracy. Domestically, the United States stipulates in

have interpreted global human rights regimes as the result of American hegemony. E.g., Totty Evans, U.S. Hegemony and the Project of Universal Human Rights (London: Macmillan, 1994).

4 Michael Ignatieff’s introduction to this volume.

PARADOX OF U.S. HUMAN RIGHTS POLICY

ever case that human rights treaties are not self-executing, internationally, the United States flatly refuses to accept the jurisdiction of external enforcement tribunals. In contrast to all other Western democracies, the United States offers its own citizens no opportunity to seek remedies for violations of internationally codified rights before either a domestic or an international tribunal. Moreover, in contrast to nearly all European democracies, the United States has incorporated few regional or international human rights norms into domestic law. Indeed, the mere prospect of acknowledging and enforcing international human rights norms at home triggers virulent partisan opposition—even in cases where the possibility of any change in U.S. policy is remote.

The paradoxical international human rights policy of the United States is widely criticized as embodying a double standard. The Lawyer’s Committee on Human Rights has charged outright hypocrisy in the implicit American view that “one set of rules belongs to the U.S. and another to the rest of the world.” Human Rights Watch and the American Civil Liberties Union denounced U.S. ratification in 1992 of the UN International Covenant on Civil and Political Rights (ICCPR) on the ground that the reservations restricting domestic enforcement rendered it a “half step” based on “the cynical view of international human rights law as a source of protection only for those outside U.S. borders.”

This policy mix is what I refer to here as “the paradox of American exceptionalism,” and what I seek to explain. Potential and proposed explanations fall into two broad categories.

In the first category are found those explanations that attribute this form of American exceptionalism to the enduring, broadly based “rights culture” of the United States. Such explanations view American exceptionalism in human rights as the result of widely held, long-standing cultural values about procedural legitimacy that render international norms intrinsically unattractive to Americans. Among the norms that are often cited as explanations for American skepticism about enforcing global human rights are popular sovereignty, local government, constitutional
patriotism, nationalism, and libertarianism. Almost all existing literature on the subject employs these explanations.

I shall consider these explanations in detail, but my primary purpose here is to present the arguments underlying, and the evidence supporting, a second category of explanations. These explanations are more rarely discussed, but—I shall seek to demonstrate—more valid empirically. These explanations attribute the exceptional ambivalence and unilateralism of the U.S. human rights policy to the calculation of American politicians about the domestic consequences of adherence to international norms, which in turn reflects the distinctive constellation of perceived interests and political institutions. I argue that the U.S. government has tended to be skeptical of domestic implementation of international norms because it is geopolitically powerful; it has long been stably democratic; it contains a concentrated, active conservative minority; and it possesses decentralized and fragmented political institutions. Superpower status means that the United States has more credible unilateral alternatives to full participation in multilateral institutions than, say, the smaller democracies of Western Europe. The stability of its domestic democratic system means that, in contrast to postwar (and post–Cold War) Europe and contemporary Latin America, its domestic actors lack the strongest self-interested motivation for implementing human rights norms, namely, the defense of domestic democratic institutions and the promotion of further democratic rights. Even more important, the existence of a vocal conservative minority in the United States actively opposed to aggressive civil and political rights enforcement through judicial review makes domestic application more controversial than it is elsewhere. Finally, and most important of all, those structural aspects of American political institutions that create veto groups and empower minorities—in particular, supermajoritarian treaty ratification rules in the Senate, the federal system, and the strength of the judiciary—render domestic legal reform via international treaties much more difficult, yet also much more consequential, than it is elsewhere.

Any one of these four general characteristics—external power, democratic stability, conservative minorities, and veto-group politics—would render governments less likely to accept binding multilateral norms. The United States is the only advanced industrial democracy that possesses all four characteristics—and hence it is predictable the country, among democracies, least likely to fully acknowledge the domestic force of human rights norms. In social scientific terms, the conception of American "exceptionalism" advanced here is generalizable: the United States is exceptional primarily because it occupies an extreme position in four structural dimensions of human rights politics, from which we would expect extreme behavior on the part of any government. These geopolitical, institutional, and ideological characteristics are more important, I argue, than the broad set of beliefs about legitimate political process embedded in national political cultures.12 Note that I am not arguing that "interests" rather than "cultural beliefs" explain U.S. human rights policy—a claim as simplistic as it is vague. My argument is more specific; U.S. policy is as it is, above all, because of the perceived substantive interests and beliefs of a conservative minority of Americans favored by a biased set of political institutions, not because of any distinctively American political culture that rejects in principle the constitutional procedures employed by international human rights institutions. To the extent that pluralist pressures interact with "rights culture," which of course they do, it is pluralist pressures that have the more powerful effect.13

On their face, pluralist and rights cultural explanations both offer plausible explanations for the U.S. failure to enforce international human rights domestically. How then are we to evaluate them? Here we shall proceed by examining the broader political context. Any explanation should account not just for American exceptionalism but for the paradox of American exceptionalism with which we started. Why do we observe an unwillingness to implement international norms on the part of a country with centuries of experience with robust judicial enforcement of do-

12 If extended to Asia, for example, such explanations would tend to call into question widespread interpretations based on particular "Asian values." For an argument along these lines, see Andrew Moravcsik and James Perry, "Why No Regional Human Rights Regime? Liberal Theory and Democratic Delegation in East Asia" (paper prepared for conference, "Bringing Politics Back In: Globalization, Pluralism, and Securitization in East Asia," sponsored by the Ford Foundation Project on Non-Traditional Security, Hong Kong, July 9, 2004).

13 This claim is easily misunderstood, given the simple dichotomy between rational/ material and cultural/poststructural causes often found in modern international relations theory. I do not argue that culture and values are irrelevant in explaining U.S. human rights policy. The source of conservative political preferences or separation of powers in the United States, to cite as examples two factors that I argue are important, may well, in either an imminent or a long-term historical sense, result from some form of cultural socialization and may continue to be buttressed by such processes. I seek to argue only, more precisely and more modestly, that "rights culture," strictly construed—that is, the existence of an autonomous set of preferences among Americans regarding constitutional forms—does not play a dominant and independent role in explaining U.S. policy in this area. Still, this explanation is more consistent with a historical institutionalist account of American political history than with a political cultural one. For this general interpretation, see Evan Steinno, Kathleen Thelen, and Frank Longstreth, eds., Structuring Politics: Historical Institutionalism in Comparative Analysis (Cambridge: Cambridge University Press, 1992). Cf. Samuel Huntington, American Politics: The Promise of Disharmony (Cambridge: Harvard University Press, 1981).
nestic civil rights standards and a strong tradition of unilateral action abroad to enforce human rights? Moreover, any explanation should be consistent with particular details about the domestic political process by which policy is made—the rhetoric and, more important, the domestic coalitions and tactics of supporters and opponents.

In the first section of this essay, I evaluate "rights culture" explanations empirically. In the second, I evaluate "pluralist" explanations that rest on instrumental calculation of social and political pressures within existing political institutions. In the final section, I draw some more speculative and skeptical conclusions about the consequences of U.S. noncompliance.

A Distinctive American Rights Culture?

Many attribute U.S. domestic nonimplementation of global human rights norms to a distinctive culture of American "exceptionalism"—that is, a pervasive sense of "cultural relativism," "ethnocentrism," or "nationalism." Specifically, I examine the following: (1) Scope: U.S. polices reject domestic application across a wide range of both political and socioeconomic rights; (2) Tactical Choices: The United States consistently contributes to the negotiation of human rights norms, engages in robust unilateral human rights enforcement policies, and has a strong domestic tradition of human rights enforcement, but does not permit domestic enforcement; (3) Cross-national Comparison: Other advanced industrial democracies have accepted international enforcement, while the United States has not; (4) Domestic Cleavages: Human rights enforcement is a partisan issue, dividing U.S. liberals and conservatives largely along ideological, and then—often partisan, lines; and (5) Rhetoric: What specific substantive arguments have opponents of human rights enforcement employed? Each of these empirical indicators of motivation has its dangers, but taken together they provide a mass of evidence enabling us to weigh and evaluate alternative causes. In this regard, I distinguish thin and thick explanations of the phenomenon. A thin explanation of U.S. nonimplementation of international norms is one that offers a coherent prima facie motivation for U.S. rejection of international human rights norms. Such explanations are easy to generate—all the cultural and political factors mentioned above easily meet this standard. Moreover, since any serious politician tends to voice multiple, redundant justifications for his or her actions, it is not difficult to find abundant rhetorical evidence of the importance of any number of factors. Such explanations are so easy to generate, they tell us little. A thick explanation, by contrast, would not only account for the U.S. rejection of the domestic application of multilateral norms per se but must also be consistent with the more detailed aspects of the process and broader context of the policy: the substantive scope of U.S. rejection, the more positive position of other countries, the domestic political cleavages, the rhetoric of opponents, and so on. For detailed discussions on process tracing, see Andrew Bennett and Alexander L. George, "Process Tracing in Case Study Research" (MacArthur Foundation Workshop on Case Study Methods, October 17–19, 1997), and Alexander L. George and Andrew Bennett, Case Studies and Theory Development (Cambridge: MIT Press, forthcoming).

ism." J. D. van der Vyer, for example, maintains that "[t]he American approach to international human rights is as much a manifestation of cultural relativism as any other sectional approach to international human rights founded on national, ethnic, cultural or religious particularities. American relativism, furthermore, also serves to obstruct the United Nations' resolve to promote universal respect for human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion." Natalie Kaufman, a leading historian of postwar Senate deliberations, characterizes consistent concern among American politicians to protect the sanctity of U.S. political institutions in a diverse world as evidence of "an ethnocentric world view, a perspective suspicious or disdainful of things foreign" dating back at least to the early 1950s. David Forsythe points to "American nationalism ... intellectual isolationism and unilateralism." Others charge the United States with outright "hypocrisy." Such rhetoric is often little more than normatively charged criticism of U.S. policy, rather than an explanation for it. In the international legal community, in particular, labeling a policy as an instance of "cultural relativism" rather than adherence to a "universal" norm is a customary rhetorical means of delegitimating it. Still, some such claims are more thought-provoking and are meant, if only implicitly, as causal explanations of U.S. policy. To evaluate them empirically, however, we must distinguish a more precise understanding of the "national, ethnic, cultural and religious particularities," the "cultural relativism," and the "ethnocentrism" that, according to critics like van der Vyer, underlie American exceptionalism.

11 This relates to another of Ignatieff's arguments about American exceptionalism. As he notes in his introduction, the distinctive rights culture is both an element of exceptionalism and a possible explanation for it.

13 Natalie Kaufman, Human Rights Treaties and the Senate: A History of Opposition (Chapel Hill: University of North Carolina Press, 1999), 44. Kaufman argues, for example, that southern racists and Cold War McCarthyism came together in the early 1950s and see the rhetorical mold for subsequent debates.

14 Forsythe, "The United States," 269, 382.

15 Quotation from Moravcsik, "Why Is U.S. Human Rights Policy So Unilateral?"

16 For classical international lawyers, a nation either accepts, at least in principle, uniform application of all international human rights norms or it is "culturally relativistic." This critique also assumes, without proof, that commitment to multilateralism is the most efficient means to promote global human rights. In real existing systems of international adjudication, such as the European Convention on Human Rights system, in fact the distinction is far less clear. All but the most essential human rights are interpreted with varying deference to a "mixture of appreciation" retained by national governments in determining the precise scope and meaning of the right.
Here I construe these sorts of "political culture" arguments to distinguish those explanations for U.S. "exceptionalism," nonratification, and noncompliance that invoke the tendency of the American public, elite, or leadership to interpret rights differently by virtue of ideological or cultural predispositions in favor of specific procedural forms. I mean thereby to distinguish cultural commitment to procedure from commitments, ideological or otherwise, to particular substantive policy outcomes, which might then lead domestic groups to interpret rights instrumentally in a distinctive way. The latter I shall treat below under "pluralist" arguments. Thus a causal link between a widespread belief in "states' rights" and U.S. nonratification of international instruments is a "rights cultural" explanation, whereas a predisposition to oppose abortion or to favor the death penalty as a policy, which then translates instrumentally into opposition to international norms (and perhaps also a defense of states' rights domestically) is a pluralist explanation based on the strength of support for conservative policy outcomes per se. The two may be, as an empirical matter, quite difficult to distinguish, but as a theoretical matter, the distinction is fundamental.

When analysts invoke "rights culture" as an explanation rather than simply as a normative criticism, they generally mean one or more of three things: (a) international obligations violate a widespread "reverence" toward the U.S. Constitution and political institutions as "sacred symbols" among U.S. legal elites and citizens; (b) a long-standing American belief in "popular sovereignty" and "local government" predisposes Americans to oppose centralized, national norms; and (c) a popular American "rights culture" of negative liberties rooted in an individualist worldview is incompatible with international human rights obligations. Let us examine each in turn.

Constitutional Patriotism and Other Forms of Nationalism

Do international obligations violate a general culture of "reverence" among American legal elites toward the U.S. Constitution as a "sacred symbol"? The claim here is that Americans, and particularly the country's legal elites, are unusually attached to their Constitution. It is clearly true, as David Golove has written of human rights law, that Americans ... are accustomed to thinking that our legal system, especially our constitutional commitment to fundamental rights, provides a model that other countries would be well advised to emulate. This confident, perhaps arrogant, self-conception as a moral beacon for the rest of the world has deep roots in U.S. history and seems as strong today as it has ever been. In contrast, many Americans are apt to be far less comfortable with the notion that when it comes
ally viewed international human rights treaties, like multilateralism in general, considerably more positively than do decision makers, particularly those in the Senate. In the 1950s, to take one prominent example, the Genocide Convention was backed by groups claiming a combined membership of 100 million voters, including organized groups of veterans, racial minorities, religious groups, workers, and ethnic Americans, while opponents could call on little more by way of organized groups than the American Bar Association.

Second, the scholarly research on U.S. human rights policy, more broadly, suggests that elite rather than mass opinion guides U.S. human rights policy. Human rights are not salient or high priority issues for either elites or the mass public—and, indeed, their salience has been declining since the end of the Cold War.49 Such are the sort of issues on which the public is more likely to follow opinion leaders. (Over time, moreover, there is reason to believe that public opinion on issues like the death penalty tracks elite behavior and policy outcomes, rather than the reverse.)50 Though mass and elite opinions tend to move in parallel and to respond to the same incentives, elite views tend to be more polarized and more coherent—that is, more consistently correlated with partisan considerations, domestic ideology, and positions on other foreign policy issues. In 1986–90, for example, the difference between the level of poll support for human rights between Democrats and Republicans in the population was only 4 percent, whereas the difference between Democratic and Republican elites was 21–38 percent.51 Elite opinion was generally more tightly linked to belief systems about, and other issues of, domestic and foreign policy.52 Differences in elite support for specific U.S. international human rights policy are closely correlated both with "a general series of foreign and military issues" and with domestic political ideology.53 The gap in support for international human rights between liberal and conservative opinion leaders approaches 50 percent (e.g., 73 percent liberal vs. 23 percent conservative elite support for proposition like "too many Iraqis were killed in the [first Persian Gulf War]").

50 Until the mid-1970s, support for the death penalty declined steadily to about 50 percent in both the United States and Europe. European governments abolished it and support remained stable or trended slowly downward, while the United States failed to abolish and a state-level movement gained support over the next few decades. See Moravcsik, "The New Abolitionism."
52 David P. Forsythe, Human Rights and U.S. Foreign Policy: Congress Reconsidered (Gainesville: University of Florida Press, 1988), 41. This is corroborated by the data in Holsti, "Public Opinion."

This leads us to a second, Tocquevillian variant of the "constitutional culture" explanation. Here the argument is that American elites are disproportionately composed of lawyers, and American lawyers tend to revere the Constitution. At first glance, this explanation seems more promising. During the Bricker amendment controversy of the early 1950s—for some, the defining moment of postwar U.S. human rights policy—we see such an alignment. Legal elites stood consistently at the forefront of opposition to the human rights norms, as against a broad coalition of religious, labor, and civic groups. In this period, the American Bar Association (ABA) led the fight against human rights treaties, which fell short of congressional ratification (in a watered-down form) by one vote. Moreover, the ABA defended its position by advancing arguments about the legitimacy of particular American constitutional elements, such as states' rights.54

Yet a broader historical and comparative view calls the Tocquevillian view into question. The 1950s, it appears, were exceptional. In the late 1940s the ABA was in fact strongly internationalist and favorable to human rights policy, pushing for a global bill of rights and a strong international court of justice. Around 1950 it shifted to opposition but then shifted back to support for global norms in the late 1960s and 1970s in response to the civil rights movement. The ABA currently supports ratification of CEDAW, ICC, and the Convention on the Rights of the Child—though the United States does not; it is open-minded with regard to domestic application of global norms.55 A comparison with Canada is similarly instructive. Like its U.S. counterpart, the Canadian Bar Association strongly opposed international human rights enforcement in the 1950s but shifted in the two following decades. Canada reversed its position on global human rights norms under Prime Minister Pierre Trudeau, and today Canada ratifies treaties and accepts international jurisdiction—except that of the Inter-American Court of Human Rights. U.S. policy, by contrast, moved only symbolically in response to the shift in legal opinion, suggesting that elite legal opinion is not the whole story. In the United States, the political system normally generates outcomes more conservative than those preferred by legal elites.

There is a deeper point here: The detailed history of the ABA's position and the specific constitutional arguments advanced against applying

54 The ABA is the most influential legal organization in the United States—more than half of American lawyers are members—and it has taken an interest in international jurisprudence since it was founded in 1878.
55 For complete background information on the ABA's current positions, see http:// www.abanet.org/poladvpriorities/intlhrts.html Background. The ABA also supports financial assistance to promote human rights NGO activities and international rule-of-law initiatives aimed at strengthening independent judiciaries abroad.
global norms (in particular, the defense of states' rights), the nature of the
opposition (largely focused among southern senators), and its timing (in
the 1950s, with a reversal when the civil rights movement gains ascen-
dancy) suggests further that ideological positions taken by the legal elite
and the defense of the sanctity of the Constitution itself, are not evidence
of a unified cultural ethos but a tactic to defend certain domestic political
interests, notably segregation and other conservative positions on the
rights of minorities. That is, while the position of U.S. legal elites generally
is incoherent and inconsistent, there is a correlation between domestic po-
sitions and international ones. Those who support a vigorous U.S. interna-
tional human rights policy are also domestic supporters of penal reform,
school busing, abolition of the death penalty, and the equal rights amend-
ment. For their part many prominent opponents of international human
rights norms are guided by conservative views about the proper role of the
judiciary today. This is consistent with the established view that "origi-
nalism" in constitutional jurisprudence is driven, at least in part, by sub-
stantive commitment to a particular set of conservative policy positions.64
In domestic courts, the Left would be aided in its efforts by the domestic
application of international norms, whereas the Right would generally be
impeled. In this sense, the particular forms of legal doctrines—origi-
nalism, "sovereignism," states' rights—are epiphenomenal. The conflict,
as we shall see in more detail when we turn to interests and institutions,
is really a pluralist one between the Left and the Right to influence juridical
institutions—the Left seeking to move the constitutional clock "forward"
in accordance with international norms, the Right seeking to turn it "back"
to the 1920s. For conservative opponents, what is most trou-
64 For example: "Originalism is a political slogan that stands for strong disagreement with a particular subset of modern decisions, not an unqualified commitment to wholesale restora-
tion of the level of consensus in U.S. society. For a critique that traces underlying conflicts over competing ideals and interests to today, in particular, between liberals committed to equal-
65 Let this seem hyperbolic, it is important to note that some critics of U.S. application of international norms are quite explicit about their desire to roll back the shift toward
toward federal power that resulted from the New Deal, the Cold War, and the civil rights movement. For an analysis of Jeremy Rabkin and William Cash, originally developed in debate at the
American Enterprise Institute, see Andrew Moravcsik, "Conservative Idealism and Interna-
such claims, I argue that selectivity in the defense of "sovereignty" (e.g., the WTO and
NATO are fine, but not the ILO or the UN) as a means to defend constitutional retrogression is a constant of conservative discourse in the United States and the United Kingdom.
hostile to checks and balances, judicial lawmaking, and individual litigation to resolve disputes.43 (The exceptions to this rule are almost all either constitutions rewritten or imposed on previously fascist countries after World War II or a subsequent democratic transition.)44 For most Western European politics, international human rights systems are the only experience with ex post judicial review for human rights purposes they have ever had. If a commitment to “popular sovereignty” has led any region of the world to oppose human rights, it should have been Europe.45

By contrast, the United States is widely viewed as the classic example of a system in which the legitimacy of courts to override the popular will in defense of human rights is widely accepted. While scholars may debate the legitimacy of a “counter-majoritarian” institution like the Supreme Court, polls reveal high levels of perceived legitimacy for courts in the United States.46 Courts are often linked with commitments to individualism and “equality of opportunity.” As compared to the citizens of other countries, Americans may retain a “Lockean” suspicion of government coercion in such matters as taxation, government ownership, welfare, and the managed economy, but few question the legitimacy of courts to render decisions on issues of human rights.47

To rescue the popular sovereignty explanation, one might argue that Americans hold a principled belief in local, small-scale democracy within a federal system, which predisposes them to reject centralized forms of rights enforcement, particularly at the international level. It is certainly true that Americans report suspicion about “big government” in Washington, and tend to trust state and local officials more.48 The United States has more elected offices per capita than any country in the world.49 The practice of electing local judges, viewed with abhorrence in most of the developed world, is widely accepted in

40 On differential levels of litigiousness, see Lipset, American Exceptionalism, 58.
42 And, indeed, in Britain, France, and Scandinavia, we see substantial opposition of just this type.
43 The classic casebook of Louis Henkin et al. is premised on this view—a parallel unthinkable in most constitutional systems in the world. Louis Henkin, Gerald L. Neuman, Diane F. Gorenstein, and David W. Lebraun, Human Rights (New York: Foundation Press, 1999).
46 Lipset, American Exceptionalism, 43.

the United States. Consistent with this view is the tendency of opponents of centralized judicial power in the United States, many of whom also oppose international human rights enforcement, to stress the importance of “states’ rights.” Trust in the Supreme Court remains high.

Yet an explanation based on localism runs into some of the same sort of objections as do the arguments from democracy or constitutional patriotism. There are other political systems in the world, such as Italy, Germany, Belgium, Canada, and Spain, with substantial attachment to local government—though such systems are fewer than the parliamentary systems—and they do not seem to translate these views into virulent opposition to multilateral treaties.50 In comparative perspective, many who inhabit these decentralized systems have strong commitments to regional identity—perhaps stronger than those of members of the more mobile U.S. population. The relevant difference for global human rights, I submit, is likely to lie not in some distinctive American conception of legitimate procedure but in the fact that certain issues relevant to human rights enforcement are uniquely important to certain regional identities in the U.S. context, and, in large part as a result, specific institutional functions (notably various rights questions and modes of federal representation) have been devolved in a way that creates political opportunities—a point to which I shall return.

To distinguish “rights cultural” objections, we must ask whether those who criticize the Supreme Court in the United States, and international tribunals by extension, do so primarily because they hold a particular philosophy of localization or because their substantive preferences in regard to how rights outcomes are better served by local government. How many principled defenders of “states’ rights” exist today? By contrast, how much support states’ rights because they favor a weakening of federal policies with regard to race, the death penalty, criminal rights, and welfare? The intensely partisan nature of the disputes—Democrats tend to support federal civilian initiatives more than do Republicans, consistent with their positions on international human rights issues—suggests a concrete understanding of ideological positions. A full discussion of this issue is beyond the scope of this essay, but below we shall consider some more evidence that substantive issue positions are indeed dominant.51

50 We see something similar, perhaps, in the tension between the prerogatives of the German Bundesländer and that country’s commitments to the EU. Fritz Scharpf, “The Joint-Decision Trap: Lessons from German Federalism and European Integration,” Public Administration 66 (Autumn 1988): 239–78.
51 The same question can be posed in historical perspective. Even if many conservatives oppose international human rights norms out of sincere commitment to certain procedural ideals, were the strength of these ideals themselves a function of restricted institutional choices? I side with those who believe they were. See John W. Kingdon, America the Unusual (New York: Worth Publishers, 1999).
Libertarianism and the Substance of Rights

A third and final "culturalist" conjecture holds that the U.S. conception of "limited government," understood as a libertarian preference for negative as opposed to positive rights, predisposes Americans to reject application of global human rights norms. This view rests on the most widely accepted understanding of "American exceptionalism" in political science and history. This classic view refers to the absence of a true socialist party and to extensive social welfare institutions present in nearly all other advanced industrial democracies. In this view, the United States rejects global human rights norms because they embody a different philosophical conception of rights—one skewed toward "positive" socioeconomic rights and positive duties rather than "negative" civil and political rights.

In sum, Americans stress liberty, whereas others stress equality.

Certainly the divergence between the United States and other advanced industrial democracies on the question of the scope of rights—and, in particular, the inclusion of social and economic rights—has influenced postwar international human rights policy. Recent historiography has revealed the important role of the Soviet bloc and the developing world (not least in Latin America) in promoting positive duties and socioeconomic rights in the UN Universal Declaration. In 1953, at the height of the Bricker amendment controversy, a leading American opponent, president of the American Bar Association Frank Holman, wrote:

"[The UN human rights system] would promote state socialism, if not communism, throughout the world.... Internationalists...propose to use the United Nations...to change the domestic laws and even the Government of the United States and to establish a World Government along socialist lines.... They would give the super-government absolute control of business, industry, prices, wages, and every detail of American social and economic life.

It is unclear to what extent this was, variously, a sincere expression of concern, a tactical effort by Southern segregationists (the core of opponents to international human rights in this period) to find allies among business-oriented Republicans, or a manipulative use of McCarthy-era rhetoric—but it is certainly consistent with a libertarian ethos. To this day, the United States has failed to ratify the UN Covenant on Economic and Social Rights, even with reservations, and shuns more specialized treaties on subjects like the rights of migrant workers, as well as nearly the entire (rather large) corpus of the International Labor Organization.

There is, I shall argue, one more nuanced strand or interpretation of this libertarian versus egalitarian argument for which there is substantial evidence. Before coming to it, however, let us set aside three simpler and more extreme interpretations for which there is less evidence.

The first implausible interpretation is that the main reason for U.S. ambivalence lies in a cultural aversion to socioeconomic ("positive") rights in the strong sense of welfare entitlements or labor rights. While the United States and most of the rest of the Western world do differ in this regard, this divergence has little relevance for the matter at hand. With the exception of the Universal Declaration, an unenforceable document, the international human rights system strictly separates civil and political rights from socioeconomic ones. The UN system, for example, distinguishes between the modestly enforceable Covenant on Civil and Political Rights, favored at the time of negotiation by Western governments, and what has remained a symbolic and rhetorical Covenant on Social and Economic Rights. Some Europeans aspire to extend the international enforcement of socioeconomic rights—an act that would be in their commercial interest as well—yet even the European Convention system and the EU do not effectively protect socioeconomic rights, and no serious effort has been made to have them do so. The United States could, therefore, at any time simply ignore socioeconomic documents, while ratifying and implementing civil and political ones—as it has indeed done in the process of negotiation. This is why, beyond intermittent rhetorical excesses exemplified by the quotation from Frank Holman above, almost no attention has been paid to economic rights in U.S. domestic debates. The exceptional level of U.S. opposition is really all about civil and political rights.

The second implausible interpretation rests on the claim that U.S. ambivalence stems from a culture of strict philosophical adherence to libertarian principles. Again this seems questionable on its face. For there is no clear correlation between libertarian philosophical foundations and issues that

42 For a recent review of this literature, see Seymour Martin Lipset and Gary Marks, It Didn't Happen Here: Why Socialism Failed in the United States (New York: W. W. Norton & Co., 2000); Kingdon, America the Unusual: Lipset, American Exceptionalism, 88-109.

44 For a characteristic example of the raw domestic argument—usually in the form of an expository law review article—see Barbara Stark, "U.S. Ratification of the Other Half of the International Bill of Rights," in The United States and Human Rights: Looking Inward and Outward, ed. David Fonsyte (Lincoln: University of Nebraska Press, 2000), 75-93. Stark asserts that interest groups avoided the Economic Covenant "with its troubling foreign policy implications," but provides no evidence of any such conscious strategy. Mostly groups simply paid no attention, as is often true domestically. Stark also asserts that the Cold War was the dominant factor pushing economic rights off the agenda in the United States, but again she provides no evidence—and the reverse might equally well have been the case.

45 I am indebted to Frank Michelman for encouraging me to render this section more precise.
appear to motivate the most salient conservative criticism of international human rights norms—which is not surprising, given that economic rights have been taken off the table.44 U.S. critics of human rights treaties take an explicitly anti-libertarian position—that is, a position advocating government intervention to limit individual freedom vis-à-vis the state on matters of criminal defense, the death penalty, prison conditions, abortion, religious rights, prisoners of war, and, in the 1950s, segregation. Opposition to rights of equal opportunity (antidiscrimination) with regard to women, racial minorities, and gay people, as well as opposition to children’s rights, might be interpreted as consistent with a libertarian conception of negative rights, but these cases are ambiguous at best.45

The third implausible interpretation holds that the United States rejects international standards because they would undermine the high levels of existing protection afforded to particular individual rights by the more “libertarian” U.S. system. True, in comparative perspective, the American Constitution and jurisprudence do enshrine and interpret expansive conceptions of certain liberties—freedom of speech, freedom to bear arms, and procedural rights of the criminal defendant, to name three. Yet again this is manifestly not the source of domestic opposition. International human rights treaties do not engage some of these issues (e.g., arms). In the case of those they do engage, norms rarely undermine existing protections, in part because they are almost always enforced to set a floor on basic rights, and in part because of the widespread recognition of a “margin of appreciation” for state policy in international human rights jurisprudence.46 And even if they were to do so, there is little evidence that such concerns are the source of domestic U.S. opposition to international treaties. The American Civil Liberties Union and their liberal allies are not spearheading the anti-human rights crusade! The concern of conservative opponents is not that judicially enforced rights will diminish, but that they will expand.

A final interpretation of “libertarian” rights culture, however, is at least prima facie plausible. It links U.S. ambivalence to a diffuse aversion to big government.47 Specifically, Americans tend to shy away from state intervention to redress social inequality—now established in most advanced industrial democracies as the primary fiscal task of the state. The aversion to state intervention is a distinctly American trait as compared to the political cultures of other advanced industrial democracies, which tend to be far more egalitarian, redistributive, and social democratic.48 This applies directly to human rights. The most salient and enduring concerns of U.S. critics of international human rights treaties all share an explicit opposition to state intervention to promote equality. The apparent motivations of supporters of international human rights standards for criminal defense, the death penalty, segregation, antidiscrimination law, social welfare, and the rights of the child are largely based on an instinctive sense that the state can and should intervene to promote egalitarian social outcomes. What appears to link conservatives across a range of controversial and sensitive issues is a rejection of that premise.

Here we reach the very extremes of a “rights cultural” argument—a place where they become very difficult to disentangle from the material and institutional arguments 1 term “pluralist.” One might debate, and many have, to what extent these conservative policy preferences are truly procedural and to what extent they reflect (or reflect a legacy of) distinctively American conceptions of appropriate desired substantive outcomes—perhaps informed by specific racial, class, or religious values. One might similarly debate the extent to which these policy preferences are autonomous or held in place by exogenous material, institutional, or ideational forces—or the legacy left by such forces in past time. Many scholars have made the case that much of the conservatism underpinning hostility to international human rights norms is the legacy of an antimajoritarian U.S. constitutional and federal structure, two centuries of southern over-representation in U.S. politics, the conservative influence of the judiciary, and so on. This is not the place to make a contribution to that venerable debate—although I think the institutionalists have rather the better of the debate at the moment. My point here is that only a cultural aversion to particular procedures that is almost indistinguishable from a substantive commitment to particular conservative policy positions offers a plausible account of U.S. policy. This finding directs us toward the pluralist explanations for the paradox of American exceptionalism.49

We have learned that simple arguments based on a homogeneous American “political culture”—that is, the cultural or ideological preference of American elites or citizens for specific procedural forms—tend to display fatal weaknesses. Such accounts explain change and cross-national differences poorly.50 Perhaps their most serious failing, and it is a classic failing

44 Nor is it surprising that U.S. conservatives would not be consistently libertarian, given the influence of various sets of Christian values.

45 The case by critics against the International Criminal Court (ICC) is also puzzling from a libertarian perspective, as one would expect support for tight judicial control over military action.

46 See Frederick Schauer’s essay in this volume.

48 This is the classic sense of “American exceptionalism,” dating back to Werner Sombart’s classic query: “Why No Socialism in America?”

49 For a balanced assessment, see Kingdon, America the Unusual.

50 The U.S. culture of foreign policy in general, and international human rights policy in particular, have changed greatly over time. Not fifty years ago, the conventional view held
of such theories, lies in the lack of an account for the extreme domestic cleavages over human rights. Rather than tracking broad ideological, professional, or sociological strata—such as legal training—procedural beliefs seem to track preexisting cleavages, often partisan ones, over substantive issues that divide Americans by race, class, and political ideology. In other words, this issue pits liberals against conservatives. This opens up the possibility that a procedural ideology is in fact a tactical choice in partisan competition. Supporters of segregation, for example, employed "states' rights" and other constitutional objections as more politically acceptable justifications for limiting federal jurisdiction in matters of race. All these reasons warrant suspicion of ideological or cultural explanations of U.S. human rights policy. We must seek other explanations that can account for the cleavages over specific rights that have emerged in the American pluralist system, and ways in which concrete institutional mechanisms for articulating those preferences influence the outcome of political conflict.

that "Americans deprecate power politics and old-fashioned diplomacy, mistrust powerful bonding armies and entangling peacetime commitments, make intuitional judgments about other people's domestic systems, and believe that liberal genealogy transfer readily to foreign affairs." Within a few years, the policy was reversed—and the conventional view is now the opposite. Joseph L. Gold and Timothy McKeown, "Is American Foreign Policy Exceptional? An Empirical Analysis," Political Science Quarterly 110:3 (Autumn 1995): 359. For one cleverly (if only partially) cultural explanation, see Jack Snyder, Myths of Empire: Domestic Politics and International Ambition (Ithaca: Cornell University Press, 1991).

I am indebted to Alex Keyser for insights on this point.

42 All assessments of motivation in politics require a measure of empirical inference, and any empirical indicator or technique for doing so has dangers. The most commonly employed indicator of motivation is public rhetoric—and it is probably the least reliable measure of motivation.

43 In general, cultural accounts are disproportionately depending on an interpretation of policy makers' rhetoric—the slippery indicator of true motivation. Talk can be cheap, cheaper than other forms of political investment, and there are thus strong incentives for politicians to deploy rhetoric, especially public rhetoric, strategically to simplify, disguise, or diversify their motivations. Self-interest is often presented as principle, extremists target swing voters to build coalitions, and narrow purposes are often made to seem broad. At the very least, cultural explanations (e.g., "Americans are committed to local government") are often simplified shorthand for a more complex process of political choice (e.g., "The United States has a federal constitution with checks and balances that hampers the centralization of policy making"). Very often politicians also diversify public justifications, which leads to long lists of factors that are easy to cite but difficult to weight—some of which may have played little or no role in the ultimate decision. A skillful politician leaves many thinking they "caused" a decision to be taken. Finally, politicians are sometimes outside the decision.

44 They are, in the language adopted above (see n. 14), thin rather than thick explanations of U.S. policy.

Pluralist Explanations for American Unilateralism

Pluralist views stress, in lieu of political culture and the "logic of appropriateness," the interplay of interests and institutions and a "logic of consequences." Support for and opposition to domestic enforcement of international norms reflect an assessment of costs and benefits in terms of policies favored by alternative political constituents. Such a pluralist calculus reflects institutional structures, substantive policy positions, and the distribution of political power. To restate the central claims of the pluralist view in general (and thus implicitly comparative) terms: Opposition to domestic application of multilateral norms is less likely in countries that possess strong unilateral bargaining power abroad, stable democratic institutions at home, preferences about substantive rights that diverge from the international consensus, and decentralized political institutions that empower small veto groups. The United States has been a liberal democracy with a history of intense concern about domestic civil rights and a sense of solidarity with other liberal democracies, yet the fact that it occupies an extreme position with regard to every one of these characteristics—power, democratic stability, conservatism, and veto-group politics—provides an empirically more viable explanation of America's exceptional ambivalence toward international human rights norms. Let us consider each of these four characteristics in turn.

The Ambivalence of a Great Power

The first general factor is the superpower status of the United States in world affairs. A straightforward "realist" argument links power to unilateralism. The costs of multilateralism for any given state lie in the necessity to sacrifice a measure of unilateral or bilateral policy autonomy in order to impose a uniform policy. All other things being equal, the more powerful (or self-sufficient) a state—that is, the more efficiently it can achieve its objectives by domestic, unilateral, and bilateral means—the greater these "sovereignty costs" are likely to be. Powerful governments
are therefore more often skeptical of procedural equality in international forums than are their smaller neighbors. This is not to say that, on balance, great powers will always oppose multilateralism, for the benefits of intense cooperation may outweigh the costs—as the United States has decided in the cases of postwar trade agreements and military alliances. Indeed, these benefits may, as hegemonic stability theorists have argued, accrue to a superpower disproportionately. Yet at the same time, the hegemon retains greater bilateral capabilities and bargaining power. There is reason to expect, therefore, that great powers will feel greater ambivalence toward multilateralism than will their less powerful neighbors. Great power ambivalence toward multilateralism seems to pervade many areas of U.S. foreign policy, including trade, monetary, financial, and security policies. The United States, a strong supporter of the GATT, the UN, and the international financial institutions at the beginning of the postwar period, has been a problematic participant, prone to unilateral and even coercive diplomacy thereafter.

The same logic obtains for human rights policy. Almost alone in the world today, the United States enjoys the luxury of making a real choice between viable unilateral and multilateral means of promoting international human rights. For human rights-conscious countries like Denmark, Chile, or South Africa, the choice is between a multilateral policy and none at all. We might, moreover, expect great power ambivalence to be more pronounced in human rights than elsewhere, because the typical model of multilateral human rights enforcement is often judicial rather than legislative. Whereas multilateral organizations like the WTO and UN essentially provide forums for legislation via interstate bargaining over new rules—a mode of interaction in which the powerful get to retain disproportionate influence—human rights norms are typically enforced through formal legal adjudication at the domestic or international level. To participate fully in such arrangements, in contrast to most legislative institutions, powerful countries must generally sacrifice some bargaining power. 28

28 Since more powerful states also have more expansive socioeconomic and political-military interests, moreover, they may also benefit more from international cooperation. We therefore expect them to demand advantageous provisions and special exceptions. See Smith, "Politics of Dispute Resolution."

29 The threat of unilateral noncompliance or withdrawal remains, but these are precisely the elements that constitute typical great power ambivalence.

30 Exercising their discretionary powers, the United States, Russia, China, Brazil, Mexico, India—tend to view international human rights enforcement with skepticism. The United States has usually been backed by Britain, France, China, and Russia in opposing efforts by smaller states, backed by international tribunals, to restrict the scope of permissible reservations to such treaties. One might extend the argument by noting that—at least in the Cold War—the American balance-of-power strategy led it to defend nondemocratic leaders of South Vietnam, Pakistan, Iran, the Philippines, Nicaragua, Chile, Taiwan, South Korea, Saudi Arabia, and eventually even the People’s Republic of China. Through the realist lens, by which “the enemy of my enemy is my friend,” these were viewed as essential “second-best” tactics in the Cold War. In this context, human rights was a propaganda tool. Even the Carter administration, though ideologically singe in its commitment to human rights enforcement, was famously selective—a policy culminating in the image of its National Security Advisor moving an M-16 at the Khyber Pass. This is consistent with the fact that the United States appears slightly more willing to ratify multilateral human rights treaties after the Cold War than it was amidst it: The Senate ratified no legally binding treaty in the 1950s and one each in the 1960s, 1970s, and 1980s, but four during the early 1990s—though after 1/1 the United States appears to have redoubled its
traditional ambivalence. When international human rights treaties—the Genocide Convention in the 1950s and 1970s, and the International Criminal Court (ICC) today, for example—raise the possibility, albeit remote, that U.S. soldiers might be prosecuted, the United States consistently stands aloof. Is it just coincidence that the governments of countries with significant foreign military involvement or power projection capabilities—Russia, Israel, France, Great Britain, and China—were among initial skeptics of a strong ICC and continue to demand exceptional treatment now that it has been established?

Whereas the superpower status of the United States may be an important consideration, it does not provide a satisfactory account of U.S. policy overall. If geopolitical flexibility were the only goal of the United States, any American administration could have its cake and eat it too by ratcheting multilateral treaties and maintaining a parallel unilateral human rights policy, while aggressively employing reservations to cordon off specific areas of heightened concern. Such a combination—essentially that pursued by countries like France, Britain, Russia, and even China with regard to many multilateral commitments—might indeed be viewed as more legitimate around the globe. Moreover, since the controversy over the Bricker amendment, the locus of opposition has lain in the Senate, not with the president, who is traditionally responsible for maintaining geopolitical flexibility. Whether or not a country possesses unilateral options, it can—as the United States often does—participate in international organizations but resist domestic implementation of its norms. Insofar as such opportunistic policy options remain viable, there is no particular reason why we should assume that a large country is less likely to sign on to a human rights treaty than a smaller one.

The geopolitical account also fails to explain the virulently ideological and partisan domestic politics that surround international treaty ratification in the United States. Domestic U.S. debates over human rights issues do not simply track the conventional geopolitical concerns of a superpower. For fifty years, domestic debates about adherence to treaties have been concerned almost exclusively with the domestic implications of adherence to human rights treaties. If the United States simply possesses a broader set of options, we should expect a measure of apathy or opportunism. The United States overcame strong domestic opposition to enter into far more significant (although not unbounded) treaty commitments, such as NATO and other Cold War military alliances, trade institutions (GATT/WTO), and international financial institutions (the IMF and World Bank). To understand why American legislators are so hesitant to cede sovereignty, we must therefore turn to the domestic determinants of U.S. human rights policy.

The Ambivalence of a Stable Democracy

A second factor contributing to U.S. ambivalence toward multilateral human rights commitments is the exceptional stability of democratic governance within its borders. At first glance this assertion may seem puzzling. In the broad sweep of history, human rights are closely linked to liberal democracy. Established, stable democracies have long encouraged...
assisted, and even fought bitter wars to uphold democracy abroad, both for idealistic reasons and because they tend to view democracy—correctly so, it now appears—as integrally linked to world peace. Yet the relationship between stable democratic governance and international human rights regimes is typically (or, at least, was until recently) more ambivalent. While they support human rights in principle, and recognize a link between democracy and security, established democracies are often skeptical of enforceable international human rights norms. This underlying ambivalence, I have argued elsewhere, was particularly evident in the period from 1930 to 1980—the founding period of the major postwar international human rights regimes such as the European Convention on Human Rights, the American Convention on Human Rights, and the UN System. In the founding negotiations of these regimes, the most stable, well-established democracies, in alliance with repressive governments, consistently opposed effective enforcement of international norms.8

A simple theoretical insight drawn from “republican liberal” theories of international relations—and from well-established theories of domestic delegation to courts and administrative agencies—offers one reason why, namely, that stable democracies gain little (and may lose more) at home from such treaties. Of course no national government likes to see its discretion limited through external constraints imposed by a judicial tribunal—whether international or domestic. Why would a government, democratic or

For generalized game theoretical results arguing that the relationship between political volatility and credible commitment holds for central banks, independent agencies, governors, and even power settlements, see Robert Powell, “The Inefficient Use of Power: Cooley Conflict with Complete Information” (unpublished Paper, University of California at Berkeley, August 2003). See also Rui de Figueiredo, “Electoral Competition, Political Uncertainty, and Policy Insulation,” American Political Science Review 96 (June 2002): 321–33.

not, risk the unpleasant possibility that its actions would be challenged or nullified when individual citizens bring complaints before a supranational body? Political scientists argue that the most important rational reason to nonetheless delegate authority to such an external institution—whether a domestic constitutional court, central bank, or administrative agency, or an international counterpart—is to “lock in” particular domestic institutions against short-term or particularistic political pressures (“political uncertainty”).

From this perspective, support for enforceable international human rights norms—at least in early phases of the development of a human rights system—can be seen, at least in part, as an act of calculated national self-interest designed to serve an overdetermining purpose, namely, to stabilize and secure democratic governance at home against threats from the extreme Right and Left. What sort of country benefits most from such an arrangement in the area of international human rights? Certainly not authoritarian or totalitarian regimes, which bear the brunt of unwelcome enforcement efforts. Yet not the most stable democracies either, for to the extent that they are already confident in the stability of democratic governance at home, they gain little additional support from international delegation. So for stable democracies, a strong normative empathy or interest in the stability of neighboring democracies, perhaps derived from potential security threats, is required to overcome this essential lack of self-interest. On self-interested grounds, the strongest supporters are likely, therefore, to be the governments of newly established and transitional democracies concerned about their future stability. They accept international constraints because these serve to stabilize their own democratic political systems, even at the cost of potential short-term inconvenience. At the founding of the European Convention on Human Rights, the most effective system of international human rights enforcement in the world today, for example, the governments of every newly established democracy in Western Europe (Great Britain, the Netherlands, Sweden, Denmark, Norway, Belgium, and Luxembourg) sided with Greece and Turkey
national institutions. Further, this may help to explain why large coalitions of lukewarm supporters of human rights treaties (for example, the Genocide Convention) let themselves be consistently outmaneuvered and outspent by smaller but more intense groups of opponents.

Finally, the fact that the United States already has—almost alone among advanced industrial democracies—a tradition of ex post judicial review that predates World War II creates a different set of incentives for both judges and human rights advocates. For supporters of human rights enforcement, this means that domestic constitutional and legal refora would be a preferred means of achieving their goals and thus would undermine support for international commitments. At the same time, recognition of the legal validity of international standards might have more real impact in areas where ex post judicial review is already established—such as constitutional issues involving discrimination and individual rights. Furthermore, some judges may be especially conservative in applying such standards, for fear of undermining their own prerogatives. The overall tendency would be both to polarize domestic politics and to induce more intense opposition to international treaty commitments.

Yet the predictable stability of American democracy does not provide a fully satisfactory explanation for U.S. reluctance to accept multilateral human rights commitments. Two anomalies are most striking.

The first is comparative. The opposition of well-established democracies to binding human rights treaties may have been the norm between the 1950s and the 1970s, but it is no longer. U.S. reluctance was similar to that of many other advanced industrial democracies until recent U.S. opposition to the Convention on the Rights of the Child or the ICC placed America in the company of rogue and failed states. Why has the United States failed to evolve as far in the same direction as have European governments?

The second anomaly concerns domestic politics. U.S. attitudes toward human rights treaties have not been characterized by apathy and ignorance, as one might expect if the problem were simply the lack of concrete benefits (or geopolitical alternatives). Nor is the most intense opposition found among judges. Instead, American domestic debate over human rights has

11 "Mandatory enforcement" in such regimes requires, at a minimum, that the hearing of disputes be formally independent of the control of national executives. In practice, this requires two elements: individual petition and compulsory jurisdiction. (This is only one of a number of conditions required for effective international adjudication. For a fuller treatment, see Moravcsik, "Origins of International Human Rights Regimes." Critical for many new (or reemerging) democracies is the experience—as during the interwar period—of democratically elected extremists slowly undermining democratic institutions by curtailing human rights: something that creates European politicians also feared from the postwar Communist left. Recent research has uncovered similar patterns in the Inter-American and UN human rights systems, as well as many other international organizations, where transitional democracies, notably in Latin America, have consistently taken the lead. Moravcsik, "Origins of International Human Rights Regimes." (The coding of Belgium has been revised.)

10 In other Western countries, either governments were concerned about the stability of domestic democracy—as in postwar Germany, Italy, and, arguable Japan, post-Cold War Eastern Europe—or they used international instruments to introduce a bill of rights or ex post judicial review for the first time, as in Britain, the Netherlands, and Scandinavia. Only in the United States was there both a preexisting system of ex post judicial rights enforcement and no concern about democratic stability.

14 The best research on international tribunals clearly shows that the incentives generated for judges seeking judicial power and autonomy play a decisive role in the domestic acceptance of international norms. See, for example, Karen J. Alter, Establishing the Supremacy of European Law: The Making of an International Rule of Law in Europe (Oxford: Oxford University Press, 2001).
been bitterly partisan and intensely ideological, and opposition is led by those who argue that international human rights norms pose a fundamental threat to the integrity of American political institutions. Any explanation of U.S. policy must account, therefore, for the significantly greater intensity of opposition within the United States than within any other advanced industrial democracy—even as the latter become stably democratic. The greater stakes, given the preexistence of judicial review, explain some of the differences, but not their more populist aspects. We must investigate the values and interests underlying the partisan nature of domestic cleavages on this issue.

The Opposition of Conservative Constituents

The third general factor helping to shape U.S. international human rights policy is the existence of concentrated conservative opposition to an expansion and enforcement of many individual rights. An "ideational liberal" (or "liberal constructivist") perspective on world politics highlights the preferences of domestic groups concerning the provision of public goods—national identity, political institutions, socioeconomic redistribution—that underlie fundamental policy goals. From this perspective, tensions among distinctive national conceptions of rights create conflict concerning any effort to promulgate and enforce a common set of international human rights standards. One expects those countries whose views about human rights are supported by a majority in the organization (the "median voter" in the international system, as it were) to be least inconvenienced by the imposition of multilateral norms, and therefore to be most supportive of them. Governments whose views are furthest from the global norm—and, in particular, those countries whose ideal conception of rights stands to be overturned—have

Further support for the distinctiveness of human rights comes from studies of U.S. multilateralism, which see U.S. multilateral commitments as generally weakening over the past few decades, whereas in the area of human rights, they appear to have strengthened slightly. See, for example, Margaret Karns and Karen Mingst, "The United States and Multilateral Institutions," in The United States and Multilateral Institutions: Patterns of Changing Instrumentality and Interest, ed. Karns and Mingst (Winchester, MA: Unwin Hyman, 1990), 1-24.

Such arguments might be termed "ideational liberal" or "liberal constructivist." Moravcsik, "Taking Preferences Seriously." These sorts of "bottom-up" arguments about preferences have secured more empirical support than have claims about top-down international socialization. See, e.g., Peter Katzenstein, ed., The Culture of National Security: Norms and Identity in World Politics (New York: Columbia University Press, 1996). Cross-national studies reveal, for example, that social democratic governments feel a greater obligation to dispense development assistance than do conservative ones. David Halloran Lumadore, Moral Vision in International Politics: The Foreign Aid Regime 1949-1989 (Princeton: Princeton University Press, 1993).

sound reasons to be skeptical of the domestic application of binding international norms. In comparative perspective, splits over human rights enforcement are generally reflected in partisan cleavages, with center-left parties supporting a more expansive enforcement of individual rights and center-right parties supporting the same or less. There are two substantive reasons for this. First, since the core corpus of international political rights law does not, as a rule, protect either property rights or rights to private education, because of primary concern to the postwar Right, and since the basic right to practice religion is unchallenged in Western societies, there is little for a center-right or right-wing party to gain through such norms—except, as we have just discussed, if they fear for the stability of democracy against the extreme Right or Left. This was the major motivation for postwar Christian Democratic parties in many Western European countries to become open champions of global human rights. Even more aspirational elements in international human rights law—such as socioeconomic rights under the UN Covenant, labor rights under the ILO, and various cultural rights—tend clearly to be favored more by the Left than by the Right. Second, insofar as they remain controversial in stabilly established democratic societies, the basic corpus of international civil and political rights—the ban on torture, freedom of expression, freedom of religion, freedom of association, due process and criminal defendant's rights, refugee rights, abortion rights, abolition of the death penalty, privacy and gay rights, and antidiscrimination rules regarding women and racial minorities—are often viewed, as we saw in considering libertarian values above, as means to realize egalitarian policy goals generally favored by the Left. This is particularly true of ex post constitutional adjudication. For these reasons, international human rights has proved bitterly controversial in the United States. American conservatives in the 1950s and 1960s viewed international human rights treaties as part of a broader movement to impose liberal federal standards—in particular, provisions banning segregation and other forms of racial discrimination—on the practices of

An exception is when both center-right and center-left are threatened by more extreme factions at home or abroad, in which case we find ourselves in the situation of a transitional democracy in the republican liberal theory.

In particular, the abolition of discrimination against racial, gender, and sexual-preference minorities, constraints on the police power of the state, abolition of the death penalty, and immigrants' rights are all areas in which, at least until recently, the body of international human rights law creates an additional tool for the enforcement of the rights of relatively weak individuals vis-à-vis democratic majorities and the state.

It need not be true of all courts. The EU's European Court of Justice was created as, and essentially remains, a commercial court. Its jurisprudence is, thus, broadly acceptable to the Right.
particular states, notably those in the South. Civil rights had remained among the
most salient issues in American politics since 1845, generating exceptionally
strong domestic opposition and eventually triggering an epochal
partisan realignment. Over the years, those who support or oppose aggres-
sive federal enforcement of civil rights have tended, respectively, to
support or oppose full adherence to international human rights norms. 89
At the beginning, the most salient concern—clear even despite the
incentives to obscure it with the constitutional language of states' rights and
senatorial prerogatives—was race. 90 From the 1940s through the 1960s,
concerns about race were linked to the fear that other minorities, includ-
ing but not primarily Communists, would mobilize around the race
issue. 91 Already in Senate Foreign Relations Committee hearings on the
UN Charter in 1945, Senator Eugene Millikin (R-CO) posed a thinly dis-
guised question to State Department officials to ascertain whether if there
were "racial questions on the Southern shores of the Mediterranean that
might have very explosive effects under some circumstances . . . this or-
ganization [the UN] might concern itself with them." (The answer was af-
firmative.) 92 In discussions of the Genocide Convention in 1949—a series
of hearings, one historian has observed, in which "the major arguments
enunciated against all human rights treaties were first articulated"—one
supporter observed: "You have to face that . . . in getting down to reali-
ties . . . the practical objection, the thing that is behind a lot of people's minds
on this convention is—its aim at lynching in the South. You have to
face that." 93 Not until the civil rights legislation of the late 1960s, which,
along with the Vietnam War, inspired a new generation of congressmen
and senators to support civil and human rights, did congressional opinion
shift at all. 94 In 1970, Richard Nixon renewed the request for Senate
ratification of the Genocide Convention, only to see Southern senators
shout it down—some arguing that "the convention would let Black Pan-
thers and other 'extremists' bring charges against the president." 95 The
Carter administration refused to push for ratification, preferring to save
its political capital for higher priorities, like the Panama Canal Treaty.
The Genocide Convention was not ratified until 1983—almost forty years
after it was negotiated—and even then only with reservations so extensive
that some believed that the United States had not really ratified at all or, if
it had, should not have been permitted to do so. 96
Overt opposition to civil rights may seem anachronistic today, but the
underlying cleavages still dominate discussion of human rights. To be
sure, once the Supreme Court reinterpretated the Constitution to forbid
segregation and once congressional powers via the commerce clause and
the Fourteenth Amendment were understood as broad enough to support
civil rights legislation, then the "civil rights campaign in the United States
became entirely domestic, any thought of effecting change in United States
law by treaty was abandoned, [and . . . ] the Bricker Amendment campa-
ign became ancient history." 97
Why, then, did the Senate remain so recalcitrant? Historians and legal
academics have appealed to mystical metaphors: "Senator Bricker's ghost
has proved to be alive in the Senate, and successive administrations have
become infected with his ideology." 98 It is more plausible to argue that

the issues underlying the aggressive enforcement of civil rights—or enforcement of norms of criminal law, housing, education, discrimination, privacy, and religion connected to race—remain controversial, albeit in an indirect form. And such controversy calls international human rights treaties into question. In comparative perspective, this distinguishes the United States from Europe. Important cases before the European Court of Human Rights have tended to involve a handful of exceptional and isolated issues such as due process under conditions of martial law (e.g., criminal and police procedure for Britain in occupied Cyprus and Northern Ireland), gay rights, corporal punishment, pornography, and the speed of trials in Italy. In the United States, by contrast, criminal procedure, police brutality, freedom of speech and religion, criminal defense, the death penalty, privacy and gay rights, prison conditions, the behavior of the armed forces, and racial and gender discrimination—even when decided by domestic courts—have been and remain salient partisan issues.

Thus the conservative body of conservative opinion that rejects the entire rights revolution since the 1920s, driven by the New Deal, the Cold War, and the civil rights movement, and supports its renewal in favor of an “originalist” understanding of the Constitution—a doctrinal tendency less salient elsewhere. The domestic (or international) application of global norms would be a substantial barrier to the realization of this agenda.

The conservative fear of international influences is not paranoid. Human rights advocates are quite explicit about their intention to use international norms to challenge U.S. practices—precisely the emerging threat that triggered Brickerism in the 1950s. In 1993, as a response to U.S. ratification of the ICCPR the previous year, Human Rights Watch and the American Civil Liberties Union jointly issued a report entitled “Human Rights Violations in the United States.” The list of violations focused, as it happened, almost exclusively on issues championed by the Democratic Party: discrimination against racial minorities, women, linguistic minorities, immigrants, as well as prison conditions, police brutality, the death penalty, freedom of information, and religious liberty. Clearly the domestic application of international standards would favor some ideologies, and thus some political parties, over others.

These structural constraints continue to influence the most recent debates, including that surrounding the Convention on the Rights of the Child (CRC). The CRC was adopted unanimously by the UN General Assembly in 1989. Within three years, it had gained 127 adherents. By 2000, 191 nations had ratified, including all but two UN member states—the United States and Somalia. In the United States the classic pattern of domestic partisan contestation dating back to the Bricker amendment emerged, with more liberal, mostly Democratic, senators supporting ratification, and more conservative, largely Republican, counterparts opposing. The first President Bush refused to sign or submit the treaty; in 1995, President Clinton signed and submitted the convention despite a Senate resolution sponsored by leading fellow Republicans, who controlled the Senate, urging him not to do so. Why has the Senate remained so skeptical? The issue has no geopolitical relevance. Nor does the treaty have any institutions for effective enforcement. Hence the United States would sacrifice little of its unilateral bargaining power in the (unlikely) event that it sought to deploy it to promote the rights of children. Advocates argue that ratification would permit the United States to participate in the CRC monitoring committee and would strengthen the U.S. role as a world leader—the closest thing to a major foreign policy argument for ratification. Consistent with the argument of this essay, most domestic debate (particularly partisan criticism) focuses instead on the substantive consequences of the treaty provisions in

108 Perhaps this will change, as working-class suspicion of immigrants and minorities increases in Europe, but for the moment, the enforcement of such rights remains relatively uncontroversial in Europe, particularly among elites.

110 See, for example, Human Rights Violations in the United States: A Report on US Compliance with the International Covenant on Civil and Political Rights (New York: Human Rights Watch and the American Civil Liberties Union, 1993), 5–8. Religious rights might appear to be a concern of Republicans, but in fact the report calls exclusively for aggressive judicial enforcement of the Religious Freedom Restoration Act, a piece of legislation passed by a Democratic Congress and signed by President Clinton in late 1993. See 165 ff. In addition, the authors of the report mention, but do not analyze in detail, some areas to which they believe the treaty would apply—notably discrimination against gay men and lesbians, as well as against people with disabilities. See 4. The authors also mention policies on public and university education.
the United States.\textsuperscript{114} This is paradoxical, since the convention would seem to have relatively few domestic implications for a country where children's rights are already strongly embedded in national law. Still, the issue triggers deep domestic ideological cleavages.

Supporters are led by human rights and child welfare activists, who maintain that governments should do more to combat the abuse and exploitation of children. Prominent advocates of the CRC include Democratic politicians and political liberals, as well as human rights groups like Amnesty International, Human Rights Watch, and the American Bar Association; child welfare groups such as the Children's Defense Fund; general humanitarian groups such as the American Red Cross; and more than three hundred other organizations. Behind Republican senators stand numerous conservative groups, of which the best-organized, best-funded, most vocal, and most influential are linked to religious groups—including the Christian Coalition, Concerned Women for America, Eagle Forum, the Family Research Council, the National Center for Home Education, the John Birch Society, and numerous conservative think tanks. Such groups maintain that the CRC is unnecessary, permits state policy (dictated by an international organization) to usurp the primary role of the family, and thus violates the concept of "parental rights" to make decisions regarding the upbringing of their children. The Family Research Council sets forth more concrete criticisms of the explicit rights promulgated in the CRC—in particular, ironically, the civil and political rights added in response to U.S. pressure—that might allow children to air their grievances against their parents in a legal forum, view "objectionable or immoral materials, often disseminated in schools," forbid parents to send their children to church if they did not want to attend, prohibit parents from preventing their children from associating with harmful company, and legalize abortion without parental consent and homosexual conduct within the home. Supporters respond that the United States is generally already in compliance with the convention, in the sense that it has established social programs addressing the issues raised in the CRC, that the language of the convention would be unenforceable without domestic law detailing more precise terms, and that reservations could handle specific concerns. They add that the CRC establishes standards for national policy to improve the condition of children all over the world but creates few, if any, enforceable rights.

Whatever the substantive merits, the domestic debate over ratification of the CRC has been dominated by its opponents. The CRC has triggered visceral opposition among religious conservatives mobilized by any hint of a threat to their particular conception of family values. Hema Magge's research and interviews suggest that they appear to be better organized, better funded, and more motivated than supporters. Some Senate staffers report that they receive a hundred opposition letters for every letter supporting the CRC. While the general human rights community remains convinced of the importance of participating in the international promulgation of the rights of the child, the bulk of liberal public and elite opinion remains uninformed and apathetic. One particular reason for the imbalance between supporters and opponents is the lack of a compelling domestic justification for U.S. adherence. Many of the most important child advocacy groups, such as the Children's Defense Fund, perhaps the most prominent such group, focus primarily on the direct provision of services to children, rather than on lobbying for rights—and have therefore been criticized for placing a low priority on ratification of the CRC. According to one leading activist, partisan Democrats simply do not care enough about the issue to move it up on the agenda.\textsuperscript{115}

A parallel divergence between the United States and other Western governments lies in the status of socioeconomic rights. In comparative perspective, the United States has a relatively informal and underdeveloped (i.e., nonsolidaristic) conception of economic rights, particularly in the areas of labor and social welfare policy.\textsuperscript{116} There has long been opposition, not least in the South and West, to aggressive centralized enforcement of labor and welfare laws.\textsuperscript{117}

For a half century, these sorts of issues—racial discrimination and the legacy it has left, labor rights, and various lifestyle-related issues—have placed the United States outside the mainstream of the global consensus on the definition of human rights. The result has been intense partisan conflict. Strong conservative opposition on such issues means that firm

---

\textsuperscript{114} Some opposition appears to reflect traditional conservative hostility toward human rights treaties in general. Moreover, whereas other countries may aim to exploit loopholes, they argue, the United States tends to examine all existing federal and state laws closely in order to assure compliance. Conservatives charge that other nations ratified hastily, without reviewing the CRC thoroughly enough to understand its full implications.

\textsuperscript{115} Some have argued that the construction of such issues is part of a deliberate effort to mobilize Americans around ideological issues with little chance of concrete action. Either way, it is a political strategy aimed at advancing substantive interests. For an influential discussion, see Thomas Frank, What's the Matter with Kansas? How Conservatives Won the Heart of America (New York: Metropolitan Books, 2004).

\textsuperscript{116} Since Werner Sombart's classic 19th book, Why No Socialism in America, commentators have recognized that the United States is the only advanced industrial country without a significant socialist movement or labor party. For an analytical overview of this phenomenon, see Seymour Martin Lipset, "American Exceptionalism Reaffirmed," in Is America Different? A New Look at American Exceptionalism, ed. Byron Shafer (Oxford: Clarendon Press, 1991), 1-45.

\textsuperscript{117} Some have linked this tendency in the 1950s to McCarthyism, in part sparked by the Truman administration's anti-Communist rhetoric, but opposition to socioeconomic rights has long outlived this era. Cf. Kaufman, Human Rights, 12-14.
adherence to international human rights norms does not command support from a broad centrist coalition, as is generally true in Europe, but instead created a deep Left-Right split between liberals and conservatives—one that fell increasingly during the post-World War II period along strict party lines. Partisan opposition in the 1950s was led by southern Democrats opposed to federal civil rights policy; today it is led by Republican senators, owing to their (globally idiosyncratic) stand on socioeconomic and racial rights, and also religious, educational, and cultural issues. In general, support for international human rights treaties comes disproportionately from Democratic presidents and members of Congress, while opposition comes disproportionately from Republican presidents and members of Congress. As David Forsythe's study of legislative behavior concluded, "human rights voting in Congress is largely . . . a partisan and ideological matter."119

The decisive importance of partisan cleavages over human rights becomes immediately evident if we examine the record of executive submission and Senate consent concerning the twelve most important human rights treaties over the past fifty years. Strong Democratic control of the Senate appears to be a necessary condition for the ratification of such treaties, even in a watered-down form. Ten of eleven initial submissions to the Senate for advice and consent were made by Democratic presidents, eight of twelve postwar agreements were signed by Democrats, and, most strikingly, the Senate has never ratified an international human rights treaty (even with reservations) when Democrats held fewer than fifty-five seats.120 If we add to this the fact that most southern Democrats were likely to vote against the party majority on this issue, then the passage of legislation, let alone a treaty, was unlikely at all until the 1970s. This suggests that partisan control of the Senate and, secondarily, the presidency, imposes a binding constraint on U.S. policy.

119 In contrast to the way this issue is often presented, this central cleavage does not primarily divide isolationists and internationalists. Major opponents of international enforcement of human rights—from Henry Cabot Lodge, John F. Reisch, and Henry Kissinger to Jesse Helms—have not been isolationists.

119 Forsythe, The United States and Human Rights, 50.

120 This record cannot be attributed to background conditions. Democrats commanded a majority of at least 55 votes only 50 percent of the time (14 sessions out of 28). The Senate contained a Democratic majority for 19 sessions and a Republican majority for 9 sessions, while each of the two parties commanded the presidency for roughly equal periods since 1947. Note also that the pattern of submission and ratification does not follow from the (somewhat exogenous) timing of negotiation and signature, since those presidents who submitted the treaties were not typically the same presidents who signed the respective agreements. The Helsinki Treaty, which generated considerable conservative support, did not apply to the United States. On the Torture Convention, the Senate convened in 1996 subject to subsequent passage of implementing legislation, which passed four years later.

No U.S. implementing legislation has ever been passed for the UN Covenant on Civil and Political Rights.

Yet in order to explain U.S. human rights policy fully, we need to go beyond the power of a concentrated conservative minority in America. Even taken together with the two other factors discussed above (superpower status and stable democratic institutions), this explanation leaves unanswered critical questions about support for U.S. human rights policy. As we are about to see in more detail, ratification of human rights treaties

Chile.
has at times been supported by a coalition of interest groups claiming to represent more than half of the U.S. public, as well as by more than half of incumbent senators. Presidents, even Republican presidents, have been at times relatively supportive. On a number of issues, U.S. and European publics converge. On the death penalty, for example, a plurality on both sides in nearly all Western countries has traditionally supported retention or reestablishment.

Yet these presidents, backed by majorities of legislators, voters, and public opinion in favor of stricter adherence to international human rights norms have failed to gain their objective. If conservatives have rarely commanded a majority of interest groups, voters, or senators, why were they nonetheless able to prevail? And why were fifty-seven or more senators, not just fifty, required to alter U.S. human rights policy? One explanation is simply that, as we have discussed in this section, conservative activists and voters feel more intensely about the issue, and it is more likely to influence their vote. Perhaps. But another explanation, more consistent with the political history, is that they are privileged by biases in the existing U.S. constitutional procedures. To this we now turn.

*The Biases in Domestic Political Institutions*

The fourth and final determinant of U.S. human rights policy is bias stemming from the fragmented nature of American political institutions. It is a cliché of comparative politics that the American system of government stands out in comparative perspective for its extreme commitment to the Madisonian schema of “separation of powers” and “checks and balances.” All other things equal, the greater the number of “veto players,” as political scientists refer to those who can impede or block a particular government action, the more difficult it is for a national government to accept international obligations. The U.S. political system is in most respects exceptionally decentralized, with the consequence that a large number of domestic political actors must approve major decisions. Three such characteristics of the U.S. political system are of particular importance to an understanding of U.S. human rights policy: supermajoritarian voting rules and the committee structure of the Senate, federalism, and the salient role of the judiciary in adjudicating questions of human rights.

*The Senate*

The most immediate veto group involved with human rights treaties, a one-third minority of recalcitrant senators, is created by the unique U.S. constitutional requirement of a two-thirds “supermajority” vote to advise and consent to an international treaty. This is a threshold higher than that in nearly all other advanced industrial democracies, which generally ratify international treaties by legislative majority. The need to secure the support of the Foreign Relations Committee chairman may render ratification doubly difficult if that position is held, as it generally has been in the postwar period, by a politician with conservative views. Overriding the decision of a committee chairman to block consideration of a treaty on the floor is nearly impossible. It is hardly surprising, therefore, that the primary barrier to the ratification of human rights treaties has been the inability to muster the necessary supermajority in the Senate. The decentralized U.S. electoral system rarely generates a sufficiently decisive partisan majority (in recent decades, Democratic, and before that, a majority sufficient to circumvent southern Democrats and their allies).

The resulting history of senatorial suspicion of liberal multilateralism spans the twentieth century—from the debate over Woodrow Wilson’s proposal for a League of Nations in 1919 to the present. Its decisive importance for U.S. human rights policy is illustrated by the failure of the Senate to ratify international agreements in many cases where there existed (slight) majority support in the Senate. This was true of the League of Nations, which was blocked by a Senate minority. We have seen that groups totaling 100 million members supported the Genocide Conven-

---

112 We have also seen that Republican presidents in three cases—Eisenhower with the Supplementary Slavery Convention and the Convention on the Political Rights of Women, and Bush with the Rights of the Child—were unable or unwilling to block the negotiation of international human rights treaties, even though they made no subsequent effort to secure their ratification. Indeed, until the recent treaty establishing the ICC, no American government appears to have voted in an international forum against a human rights treaty that passed—though U.S. negotiators have attempted to water down a number of provisions. This suggests that conservative presidents (and even a conservative like Ronald Reagan) and advocates of human rights treaties alike labor under tight political constraints imposed by decentralized American political institutions.

---

113 Switzerland requires a referendum for certain commitments.

114 This may help explain why large Democratic majorities, the Watergate generation of legislators, the civil rights movement, and the rise of public interest groups in the late 1960s and early 1970s did not lead to the ratification of many international human rights treaties in the United States. These groups controlled the House of Representatives, where they were able to influence foreign policy through appropriations, but they had far less influence on the Senate. Cf. Norman J. Ornstein and Shirley Edele, *Interest Groups, Lobbying and Policy-Making* (Washington, DC: Congressional Quarterly Press, 1978), 4–7.

115 For an engaging overview, on the role of conservative southern Democrats, see Robert Caro, *Master of the Senate: Lyndon Johnson*, vol. 3 (New York: Knopf, 2002).
tion, yet what mattered most were the attitudes of the senators themselves, who are disproportionately representative of conservative southern and rural midwestern or western states. More than fifty senators publicly declared their support for the Convention to Eliminate Discrimination against Women (CEDAW), yet this treaty long remained stalemated in committee by Senator Helms and appears to lack the requisite two-thirds support needed to pass on the Senate floor. The unique constitutional role of the Senate helps explain why robust U.S. action to support international human rights norms—whether unilateral or multilateral—tends typically to originate in either the executive branch or the House of Representatives, and often uses budgetary, regulatory, or diplomatic instruments, rather than the process of treaty ratification and domestic legal change.

THE STATES

Constitutional separation of powers also establishes important prerogatives for the states vis-à-vis the federal government, and this in turn permits conservative opponents to resist imposition of federal and global human rights norms. States' rights, as we have seen, have been an important tool for domestic opponents of international human rights treaties, and underlying this apparently principled defense of states' rights was a distinct substantive agenda. The legal structure of federalism is a favorable institutional context in which to oppose the imposition of human rights norms.

Perhaps the most striking example of the decisive importance of federal institutions is in the failure of capital punishment. As near as we can tell, the historical fundamentals of public support for the death penalty among Americans are not strikingly different from those of Europeans. Support slowly declined from more than 60 percent to just 45 percent during the 1960s and early 1970s. (Only in the late 1970s, with intense organization around the issue, did U.S. public opinion support rise once again.) This is more or less the pattern in Europe, where support for the death penalty has declined, but it nonetheless continues to command plurality support. Even today, after a generation of abolition, a plurality or majority of Canadians (70 percent), Britons (65–70 percent), Australians and Italians (50 percent), and Swedes and French (49 percent) favor the reinstatement of the death penalty.

The difference between the continents lies in the response of political institutions. In Europe, one ruling party after another abolished the death penalty in the 1970s and 1980s, despite near majorities in favor of its retention—whereupon the issue disappeared as a matter for public contestation. Surely this was possible in part because, as compared to the federal and separation-of-powers system in the United States, European parliamentary systems tend to discourage regional and single-issue politics and to create clearer partisan majorities unhindered in this area (even in federal states) by subnational prerogatives. Regional institutions like the EC and ECHR have further entrenched and extended European abolitionism.

In the United States, by contrast, abolition of capital punishment would require fundamental constitutional change in a system where such change is nearly impossible. Criminal law is largely the province of the individual states, and any effort to standardize state policy must therefore coordinate legislative, electoral (notably referenda), and judicial action in the thirty-eight states that currently impose the death penalty. Any federal legislation to limit capital punishment would face the de facto supermajoritarian rules in the Senate and would in any case be limited to federal crimes. The only centralized political instrument able to achieve abolition would therefore be a declaration that capital punishment is unconstitutional. In the United States during the 1970s, the U.S. Supreme Court came close to doing just that, and the death penalty had in any case fallen into disuse at the federal level. (At last count, only nineteen of more than thirty-seven hundred American death row prisoners are in federal prison, and there were no federal executions between 1963 and the recent executions of Timothy McVeigh and Juan Raul Garza.) Yet the U.S. Court backed down in the face of a state-level movement beginning with the most conservative areas of the country. The only remaining recourse would be a constitutional amendment, which would be impossible without even broader support—three-quarters of the state legislatures or a similar congressional supermajority. State courts, though often more liberal, have been even less willing to act, perhaps because many judges on the state bench are elected and abolitionist actions can trigger successful efforts to defeat or

127 The overt concern with race is one important reason—a reason perhaps more important than commitment of principle—why "the main opposition to the treaty was rooted in states' rights," Kaufman, Human Rights, 52–53. Some southerners went further, claiming that "the abrogation of states' rights was the major objective of the genocide treaty." Certainly much of the Senate debate concerned these constitutional issues. Kaufman, Human Rights, 44–45.
128 For a more detailed analysis, see Moravcsik, "The New Abolitionism"; "The Death Penalty: Getting beyond Exceptionalism (A Response to Silvia and Sampson)," European Studies 1/3 (December 2001).
recall judges. The result: State politicians and publics are empowered to set death penalty policy in accordance with local preferences—which encour-
gages the penalty’s perpetuation. 113

The basic lesson to be drawn from the case of capital punishment is thus the decisive importance of the incentives and opportunities created by political institutions. This suggests two corollaries. The first, contra Cass Sunstein in this volume, is that we should be cautious about attribut-
ing too much impact to a single contingent decision by political actors at one point in time—in this case, the Supreme Court’s reversal on the death penalty in the 1970s. 114 It is true that a bolted Supreme Court might have abol-
ished the death penalty for good. Yet the deeper lesson of this episode is that most of the time in the U.S. political system, this will not occur, because the conservative position is favored by federal prerogatives and political opportunities, by senatorial stasis, and by the intensity of feeling among a conservative minority. What is striking is not that the Supreme Court did not act, but that the structural window of opportunity was so brief, that similar windows are so rarely seen in other areas of human rights, that the decision was never in the hands of a directly elected chief executive or legislative majority, and that other countries responded to similar opportunities quite differently.

The second corollary to draw from the case of capital punishment is that we should be suspicious of facile claims about the autonomous import-
ance of shared values or public opinion. The evidence suggests both that the death penalty is an issue of little salience, as compared to bread-
and-butter issues of taxing and spending, and that public opinion on such issues can be and is often manipulated. Public opinion on the death pen-
alty tends to track national political decisions, political manipulation by politicians, and pressure from small intense interest groups. So in Europe, where the institutions do not facilitate mobilization on the death penalty, the issue has little salience and public opinion is adapting—albeit slowly. In the United States, where institutions permit decentralized action, long-
term trends in public support for the death penalty appear to have been buoyed up by pressure from intense conservative minorities.

THE COURTS

The decisive basis of most successful international adjudication and judicial enforcement systems lies with the domestic judiciary. 115 The U.S. sys-

113 This argument follows Moravcsik, “The New Abolitionism.”

114 See Cass Sunstein’s essay and Michael Ignatieff’s introduction in this volume.

Minority groups in this country are not vigorously seeking to have... discrimination abolished by Federal legislation. Can there be any reasonable doubt that if Congress fails to enact the civil rights laws now being urged upon it and if this convention is ratified as submitted, members of the affected groups will be in a position to seek legal relief on the ground that this so-called Genocide Convention has superseded all obnoxious state legislation.\(^{127}\)

In scenarios such as this, the primary fear of conservatives was that individuals would seek legal relief before U.S. courts. In recent years, similar rhetoric has been employed to oppose the International Criminal Court—with the specter of a kangaroo court of international technocrats sitting in judgment over GIs—whereas the primary (if often unspoken) fear is actually that U.S. military prosecutors would be forced to prosecute U.S. soldiers under U.S. law to preempt international action. Similar concerns have been voiced about abortion, the death penalty, and other issues.\(^{128}\)

**Does It Matter?**

It is natural to ask: What are the consequences of U.S. "exceptionalism" and noncompliance? International lawyers and human rights activists regularly issue dire warnings about the ways in which the apparent hypocrisy of the United States encourages foreign governments to violate human rights, ignore international pressure, and undermine international human rights institutions. In Patricia Derian's oft-cited statement before the Senate in 1979: "Ratification by the United States significantly will enhance the legitimacy and acceptance of these standards. It will encourage other countries to join those which have already accepted the treaties. And, in countries where human rights generally are not respected, it will aid citizens in raising human rights issues."\(^{129}\) One constantly hears this refrain.

Yet there is little empirical reason to accept it. Human rights norms have in fact spread widely without much attention to U.S. domestic policy. In the wake of the "third wave" democratization in Eastern Europe, East Asia, and Latin America, governments after government moved ahead toward more active domestic and international human rights policies without out-attending to U.S. domestic or international practice.\(^{130}\) The human rights movement has firmly embedded itself in public opinion and NGO networks, in the United States as well as elsewhere, despite the dubious legal status of international norms in the United States. One reads occasional quotations from recalcitrant governments citing American non-compliance in their own defense—most recently Israel and Australia—but there is little evidence that this was more than a redundant justification for policies made on other grounds. Other governments adhere or do not adhere to global norms, comply or do not comply with judgments of tribunals, for reasons that seem to have little to do with U.S. multilateral policy. Perversely, anti-Americanism may indeed fuel the solidarity of others behind the promulgation of multilateral human rights norms—as appears to have been the case in the closing days of the ICC negotiations.\(^{141}\)

The pluralist account defended in this essay suggests instead that the primary winners and losers of U.S. nonadherence to international norms are various groups of American citizens.\(^{142}\) This is so for two reasons. First, adherence to international human rights regimes would signal a significant symbolic shift in—and likely have an eventual practical impact on—the nature of human rights enforcement in the United States, not least by courts.\(^{143}\) Jack Goldsmith has argued:

A domesticated ICCPR would generate enormous litigation and uncertainty, potentially changing domestic civil rights law in manifold ways. Human rights protections in the United States are not remotely so deficient as to warrant these costs. Although there is much debate around the edges of domestic civil and political rights law, there is broad consensus about the appropriate content and scope of this law... built up slowly over the past century. It is the product of years of judicial interpretation of domestic statutory and constitutional law, various democratic practices, lengthy and varied experimentation, and a great deal of practical local experience. Domestic incorporation of the ICCPR would threaten to upset this balance. It would constitute a massive, largely standardless delegation to federal courts to rethink the content and scope of nearly every aspect of domestic human rights law.\(^{144}\)

Conservative critics like Goldsmith may hold extreme views (in global and domestic perspective), but they are not, given the power of the judi-

---

\(^{128}\) The failure of the Supreme Court to abolish the death penalty, along with the launching of a state-level movement in certain parts of the country to expand its use, owes much to the opportunities created by state and local government. See Moravcsik, "The New Abolitionism."

\(^{130}\) Some argue that the democratic waves that swept through Eastern Europe and Latin America in recent decades were facilitated by civil society networks that were, in turn, fostered by international regimes. But this argument has little to do with U.S. domestic practice.

\(^{142}\) For a more detailed argument, see Moravcsik, "Why Is U.S. Human Rights Policy So Unilateral?" 364–79.

\(^{143}\) For various scenarios, see Goldsmith, "Should International Human Rights Law Trump US Law?" 332–35. For a detailed and definitive treatment of "judicial cross-fertilization," see Slaughter, A New World Order.

record on human rights issues. It is not clear that this is truly the case, and it is even less clear that U.S. membership on bodies like the UN Human Rights Commission matters much.

Recent events under the administration of President George W. Bush suggest also that the attainment of overall national security and diplomatic goals of the United States has been undermined by the failure of the United States to be perceived as a country that upholds human rights. This perception results in part from specific actions of the United States both domestically, as with the continued practice of the death penalty, and internationally, as in U.S. support for Israeli tactics in the occupied territories and in the handling of detainees connected with the wars in Afghanistan and Iraq, epitomized by the scandals emerging from Abu Ghraib and Guantánamo. An additional factor of some importance, however, has been the U.S. refusal to acknowledge widely accepted international legal norms with regard to the Geneva Conventions, the International Criminal Court, and various other international conventions. This has undermined the legitimacy of U.S. foreign policy internationally by giving the impression that the United States rejects the application of basic universal human rights norms to itself as a matter of principle. Some argue that this has undermined the war on terrorism by blurring any principled distinction between terrorism and counterterrorism, by exacerbating political and social conditions that breed terrorism, and by undermining international cooperation.

Conclusion

I have argued that rights-cultural explanations for U.S. opposition to the domestic application of global human rights norms—explanations based on diffuse cultural commitments to procedural values like popular sovereignty, democratic localism, constitutional patriotism, national par-
ticarsity, and negative rights—are both vague and empirically unconvincing. Some such explanations fail to provide even a "thin" prima facie explanation for the rhetoric employed by politicians, and none provide a "thick" explanation that can also account for the nature of domestic cleavages, change over time, and the elements that make U.S. behavior paradoxical, namely, the strong domestic tradition of rights enforcement and bold unilateral and sometimes multilateral policies to promote human rights abroad.

Insofar as empirical evidence supports any rights-cultural explanation, it is not those variants that stress broadly held procedural norms of constitutional patriotism or popular sovereignty, but only that variant stressing the existence of an intense minority in the United States committed to a series of conservative positions allied with, but not derived from, skepticism about state power. This is, of course, closely related to the classic and undisputed description of American political exceptionalism, namely, the lack of a socialist movement—and thus a social welfare state—in America. (The close link to such a widely documented aspect of American political life should give us greater confidence in the basic claim.) From 1945 to 1970, the dominant substantive concern motivating such conservative opposition was undoubtedly race, and, like conservative opposition to expansion in the jurisdiction of the federal government, it aimed primarily to defend segregation and racial discrimination. Since then the relevant conservative agenda has broadened to include issues often connected with race, but also lifestyle issues of greatest importance to a religious minority: abortion, the traditional family, religion, capital punishment, and criminal procedure.

It is important to note that this variant of a rights-cultural argument, as opposed to truly procedural variants, is more consistent with what I have termed a "pluralist" explanation based on the substantive interests of powerful minorities as filtered through political institutions. Scholars disagree, moreover, as to whether the persistence and power of conservative views ought to be regarded as an autonomous cultural phenomenon at all, or whether it reflects the combined power and historical legacy of moneved interests, minorities organized around intense concerns, and political institutions like the Senate and federalism that have long magnified conservative influence. The case of the death penalty suggests that public opinion often reflects, rather than drives, institutional and policy shifts.

For this reason and others, pluralist explanations of American ambivalence with regard to international human rights commitments—U.S. power, democratic stability, conservative extremism on particular issues, and fragmented American political institutions—offer a theoretically more precise and empirically more plausible explanation for the extraor-

dinary status of the United States. No other nation in the modern world is characterized by the same combination of geopolitical power, democratic stability, conservative ideology, and institutional decentralization. Thus it is no surprise that no other country pursues an ambivalent and unilateral human rights policy as does the United States.

This is a sobering conclusion, for it suggests that U.S. ambivalence toward international human rights commitments is not a short-term and contingent aspect of specific American policies. It is instead woven into the deep structural reality of American political life. This is so not, for the most part, because international human rights commitments are inconsistent with a particular understanding of democratic ideals like popular sovereignty, local control, or expansive protection of particular rights shared by most Americans. It is true, rather, because a conservative minority favored by enduring domestic political institutions has consistently prevailed in American politics to the point where its values are now embedded in public opinion and constitutional precedent. The institutional odds against any fundamental change in Madison's republic are high. To reverse current trends would require an epochal constitutional rupture—an Ackermanian "constitutional moment"—such as those wrought in the United States by the Great Depression and the resulting Democratic "New Deal" majority; in Germany, France, and Italy by the end of World War II; and in all European countries through a half century of European human rights jurisprudence. Short of that, this particular brand of American ambivalence toward the domestic application of international human rights norms is unlikely to change anytime soon.

120 I am indebted to Michael Ignatieff for posing the question of structure and contingency more sharply.
