NONLINEAR OPTIMIZATION OF COMMUNICATION SYSTEMS

PAPERS
An Introduction to Convex Optimization for Communications and Signal Processing (Tutorial Paper) ....................
.............................................................................................................. Z.-Q. Luo and W. Yu 1426
A Tutorial on Decomposition Methods for Network Utility Maximization (Tutorial Paper) ................................
................................................................................................... D. P. Palomar and M. Chiang 1439
A Tutorial on Cross-Layer Optimization in Wireless Networks (Tutorial Paper) .... X. Lin, N. B. Shroff, and R. Srikant 1452

Optimization of Wired Networks
Layered Multicast Rate Control Based on Lagrangian Relaxation and Dynamic Programming ...........................
.......................................................................................................... K. Kar and L. Tassiulas 1464
Distributed Utility Maximization for Network Coding Based Multicasting: A Shortest Path Approach ..................
............................................................................................................. Y. Wu and S.-Y. Kung 1475
Super-Fast Delay Tradeoffs for Utility Optimal Fair Scheduling in Wireless Networks ...................... M. J. Neely 1489
Distributed Nonlinear Integer Optimization for Data-Optical Internetworking .... A. Elwalid, D. Mitra, and Q. Wang 1502

Optimization of Wireless Networks
Joint Congestion Control, Routing, and MAC for Stability and Fairness in Wireless Networks .........................
.................................................................................................... A. Eryilmaz and R. Srikant 1514
Adaptive Sensor Activity Control in Many-to-One Sensor Networks ........................................... Z. Hu, J. Zhang, and L. Tong 1525
Mathematical Decomposition Techniques for Distributed Cross-Layer Optimization of Data Networks ...........
........................................................................................................ B. Johansson, P. Soldati, and M. Johansson 1535

(Contents Continued on Back Cover)
Cross-Layer Rate Optimization for Proportional Fairness in Multihop Wireless Networks With Random Access .............................................................. X. Wang and K. Kar 1548

Optimization in Communication Theory and Signal Processing

Multiuser Margin Optimization in Digital Subscriber Line (DSL) Channels .......... S. Panigrahi, Y. Xu, and T. Le-Ngoc 1571
Optimizing Power Efficiency of OFDM Using Quantized Channel State Information ......................................................................................... A. G. Marqués, F. F. Digham, and G. B. Giannakis 1581
Queue Proportional Scheduling via Geometric Programming in Fading Broadcast Channels ................................................................. K. Seong, R. Narasimhan, and J. M. Cioffi 1593

Optimization in Information, Coding, and Queueing Theories

Nonlinear Programming Approaches to Decoding Low-Density Parity-Check Codes ................................................................. K. Yang, J. Feldman, and X. Wang 1603
Optimal Bandwidth Allocation in a Delay Channel ......................................................................................... N. Ehsan and M. Liu 1614
Optimized Transmission for Fading Multiple-Access and Broadcast Channels With Multiple Antennas ........................................................................ M. Mohseni, R. Zhang, and J. M. Cioffi 1627
An Iterative Water-Filling Algorithm for Maximum Weighted Sum-Rate of Gaussian MIMO-BC ................................................................. M. Kobayashi and G. Caire 1640
Error Exponents for Channel Coding With Application to Signal Constellation Design ................................................................. J. Huang, S. Meyn, and M. Médard 1647

Upcoming Issues of the IEEE JOURNAL ON SELECTED AREAS IN COMMUNICATIONS
