

Benefits of your Greening Princeton/Dining Services mug

When used as directed your mug will save you money make your life more convenient and also help save the environment!

Saving you money

Present your mug at any retail location and save on any beverage purchase!
Organic Fair Trade coffee tastes especially good in this mug!

Making life convenient

Because of the great expense of lost mugs Dining Services had to prohibit students from carrying away beverages like that much needed coffee before a am class Now you can fill your recycled plastic mug with a dining hall beverage and take it with you! 😊

Saving the environment

Thousands and thousands of plastic paper and Styrofoam cups will sit in landfills for millennia! *But one less for each time you use your GP/DDS mug!* Each cup you save from the landfill is another cup that doesn't need to be made lessening the strain on forests and the environment The production process consumes considerable energy and often entails numerous toxic chemicals Moreover your mug stimulates the recycling industry in general since it is made of recycled plastic (food container laws decree that the materials in contact with the food not be recycled) If there were more of a market for recycled materials there would be more of an incentive for municipal recycling programs and more of the environmental benefits above (reduced energy use carbon emissions and toxic pollutants)
