CONTENTS

I. INTRODUCTION ................................................................. 15
   A. Discussion of Major Issues ........................................... 15
   B. Congressional Concern for Materials Information ............... 16
   C. Assessment Approach ................................................. 17

II. INFORMATION REQUIREMENTS OF THE U.S. MATERIALS SYSTEM ...... 21
   A. Introduction ............................................................. 21
   B. Materials in the U.S. Economy ....................................... 22
   C. Materials Decisionmaking ............................................ 24
      1. Decisionmaking Complexity ....................................... 24
      2. Decisionmaking in the Marketplace ............................... 24
      3. Decisionmaking in the Federal Government ..................... 27
   D. Existing Materials Information Systems ........................... 31
      1. Scientific and Technical Information ............................ 32
      2. Technical Trade Information ...................................... 35
      3. Inventory and Economic Information ............................. 36
      4. Information Handling .............................................. 36
   E. Summary ........................................................................ 42
   F. References .................................................................... 42

III. THE NEED FOR IMPROVING FEDERAL MATERIALS INFORMATION SYSTEMS CAPABILITIES ......................................................... 47
   A. Introduction .................................................................. 47
   B. Literature Review ....................................................... 48
      1. The President’s Materials Policy Commission Report ........ 48
      3. The COSMAT Report .................................................. 50
      4. The National Materials Advisory Board Surveys ............... 50
      5. GAO Report on Commodity Shortages ............................. 52
      6. The Federation of Materials Societies Survey .................... 55
      7. Prospective Functional Requirements of an Improved System 56
   C. Review offending Legislation ......................................... 58
   D. Interviews with Materials Decisionmakers .......................... 58
      1. Senior Level Executives .............................................. 59
      2. Aluminum Specialists ................................................ 62
   E. Foreign Materials Information Systems ............................. 71
   F. Improved Functional Requirements ................................... 75
      1. Functional Requirements—Supply .................................. 75
      2. Functional Requirements—Utilization .............................. 76
      3. Functional Requirements—Supply/Utilization .................... 77
G. Integration of Functional Requirements ................................................................. 78
  1. Supply Considerations ..................................................................................... 79
  2. Utilization Considerations ............................................................................... 81
  3. Supply/Utilization Interrelationship and Management Actions ................. 81
  4. Evolution of Capabilities................................................................................. 83
H. Summary ............................................................................................................... 88
I. References ............................................................................................................. 89

IV. POTENTIAL OF EXISTING FEDERAL MATERIALS INFORMATION SYSTEMS TO
SUPPORT THE INTEGRATED CAPABILITIES .............................................................. 93
A. Introduction ......................................................................................................... 93
B. Congressional Information Systems ................................................................. 94
C. Executive Materials Information Systems ....................................................... 96
   1. Data Bases and Information Management Systems ...................................... 96
   2. Mathematical/Analytical Models ................................................................ 102
D. Required Improvements in Materials Information Systems ...................... 109
   1. Completeness of Data Bases ....................................................................... 109
   2. Accessibility .................................................................................................. 109
   3. Standardization ......................................................................................... 110
   4. Reliability/Accuracy .................................................................................. 110
   5. Timeliness .................................................................................................. 110
   6. Statistical/Analytical Capability ................................................................ 110
E. Summary ............................................................................................................. 111

V. OPTIONS FOR ACHIEVING THE INTEGRATED CAPABILITIES ............................ 115
A. Introduction ......................................................................................................... 115
B. Legislative and Executive Implementing Options .......................................... 116
   1. Evolution of Current Systems Without Direct Action ................................. 116
   2. Legislative Branch Options Short of New Authorizing Legislation ........... 117
   3. Executive Branch Options Short of New Authorizing Legislation ............. 120
   4. Options Through Legislation ..................................................................... 121
C. Alternative Information Systems Approaches ............................................... 122
   1. Approach A: Coordinated Systems Evolution .............................................. 125
   2. Approach B: Directed, Step-by-Step Upgrading of Existing Information
      Systems ......................................................................................................... 128
   3. Approach C: New Information System ......................................................... 140
D. Cost Estimates .................................................................................................... 145
   1. Data Collection Costs ................................................................................. 147
   3. Approach B: Development, Automation, and Operation Costs ............... 148
   4. Approach C: Development, Automation, and Operation Costs ............... 150
E. Summary ............................................................................................................. 151
   1. Approach A ................................................................................................. 152
   2. Approach B ................................................................................................. 153
   3. Approach C ................................................................................................. 154

VI ALTERNATIVE INSTITUTIONAL ARRANGEMENTS FOR IMPLEMENTING THE
IMPROVED CAPABILITIES ......................................................................................... 159
A. Introduction ......................................................................................................... 159
B. Institutional Arrangements
   1. Institutional Arrangements for Incremental Improvement of Existing Systems
   2. Institutional Arrangements for Major Improvements in Existing Systems: An Executive Branch Location
C. Selected Implementation Alternatives
   1. Rationale for Specific Alternatives
   2. Selected Implementation Alternatives

II. ANALYSIS OF POSSIBLE IMPACTS
   A. Introduction
   B. Impacts on Government
      1. Support for Governmental Planning and Priority Selection
      2. Increased Ability of Decisionmakers to Cope with Materials Problems
      3. Possible Improvement in Relationships Between Federal State, and Local Governments
      4. Changes in the Distribution of Influence and Responsibility Among Federal Agencies
      5. Support for Increased Public Participation in Decisionmaking
   C. Impacts on the Economy
      1. Improved Ability of the Private Sector to Meet National Needs for Materials
      2. Clarification of Materials Substitution and R&D Options
      3. Support for Industrial Planning
      4. Changes in the Competitiveness of the Materials Industry
      5. Stimulus to Governmental/Industrial Cooperation in Materials Policy Development and Implementation
      6. Clarification of Consumer Choices
      7. Contribution to Land Use and Regional Planning
   D. Social Impacts
      1. Improved Materials Information Management
      2. Increased Access to Materials Information
      3. Concern Over Individual and Corporate Privacy and Control of Information
      4. Movement Toward Futures Research and Interest in Alternative Futures
      5. Media Treatment of Materials-Related National Problems
   E. Impacts on International Policymaking
      1. Awareness of Need for International Materials Information
      2. Operation of Multinational Corporations
      3. Increased Ability to Cope with International Materials Cartels
      4. Improved Basis for Foreign Policy on Materials and Trade
      5. Stimulation of Use of Satellites for Information Purposes
   F. Impacts on Public Law
      1. Submission and Validation of Materials Data
      2. Exchange of Materials Information by Government Agencies
      3. Application of the Freedom of Information Act to Data in Materials Information Systems
      4. Revision of Reporting Requirements for Materials-Related Industries
      5. Promotion of Other National Policies and Programs
G. Impact of Alternative Levels of Improvement
   1. Incremental Level
   2. Intermediate Level
   3. Maximum Level

H. Overall Summary of Impacts
   1. Impacts Judged To Be Beneficial
   2. Impacts Judged To Be Mixed
   3. Impacts Judged To Be Detrimental
   4. Conclusions Regarding Possible Impacts

VIII. IDENTIFICATION AND ANALYSIS OF POLICY ISSUES.

A. Introduction

B. Role of the Federal Government with Respect to Private Sector Materials Information

C. Authority of the Federal Government to Require Disclosure of Materials Information
   1. Sources of Federal Jurisdiction
   2. Limitations on Exercise of Federal Authority
   3. Conclusion

D. Openness in Government and the Protection of Confidential Business Information
   1. Public Access to Information
   2. Protection of Confidential Business Information
   3. Conclusions

E. Distribution and Control of Materials Information in Society

F. Competition within the American Economy
   1. Materials Substitution
   2. Materials Research and Development
   3. Industrial and Business Planning
   4. Competition Among Smaller Versus Larger Firms
   5. Role of the Federal Government
   6. Conclusion

G. The Growth of Governmental Planning
   1. Public Planning in the United States
   2. Materials Planning at the Federal Level
   3. State/Local Materials Planning

H. The Future of Intergovernmental Relations
   1. American Federalism and Materials Problems
   2. Intergovernmental Cooperation
   3. Intergovernmental Friction
   4. Conclusions

I. Participation in the Political Process
   1. Role of Information
   2. Reduced Barriers to Participation
   3. Wider Range of Participation
   4. Conclusions

APPENDICES

Appendix A—Materials Substitutability
A. Introduction ........................................... 229
B. Decisions and Decisionmakers .......................... 231
C. The Process of Substitution Analysis .................. 232
   1. Materials Users ................................... 232
   2. National Policymakers ............................. 236
D. Information Requirements for Substitution Analysis ............................... 241

Appendix B—Acronyms .................................. 247

LIST OF TABLES

1. Selected Examples of Government Materials Activities ......................... 4
2. Alternative Institutional Arrangements .............................................. 8
1. Needs Identified in Major Materials-Related Legislation .......................... 17
II-2. The Materials-Oriented Sectors of the Economy ................................. 23
II-3. Factors Tending to Diminish Supply .............................................. 28
II-4. Some Examples of Government Materials Activities ........................... 29
II-5. Possible Government Actions in Regard to Mineral or Material Production and Consumption .............................................. 30
II-6. Examples of Elements Within Existing Materials Information Systems .... 32
II-7. Some Materials-Oriented Information Analysis Centers ......................... 38
II-8. Large, Medium, and Small Specialized Materials Information Analysis Centers .............................................. 40
II-9. National Materials Advisory Board Study of Information Analysis Centers ... 52
II-10. Selected Results of FMS Survey .................................................. 58
II-11. References to Functional Requirements in Principal Materials Studies ... 59
II-12. Prospective Functional Requirements Reflected in Legislation of 93rd and 94th Congresses .................................................. 60
II-13. Materials Executives Interviewed ............................................... 61
II-14. Importance of Functional Objectives as Viewed by Materials Executives .... 62
III-1. Information Systems Used by Aluminum Survey Respondents ................ 64
III-2. Representative Test Questions .................................................... 69
III-3. Reported Coverage of Aluminum Data Bases by Component of the Materials Cycle .............................................. 70
III-4. Accuracy of Aluminum Data Bases .............................................. 71
III-5. Aluminum Community Perceived Need for an Improved Materials Information System .............................................. 72
III-6. Functional Requirements Cited by Aluminum Specialists ....................... 73
III-7. Level of Concern for the Indirect Functional Requirements ..................... 74
IV-1. Congressional Agencies Serving Legislative Information Needs ................ 95
IV-2. Agency Personnel Interviewed During Survey ................................ 97
IV-3. Institutional Characteristics of Selected Data Bases and Associated Information Management Systems .............................................. 98
IV-4. Content Characteristics of Selected Data Bases ................................ 99
IV-5. Data Collection and Handling Characteristics of Selected Data Bases ........ 100
IV-6. Data Maintenance and Reporting Characteristics of Selected Data Bases and Associated Information Management Systems .......... 101
IV-7. Mathematical/Analytical Models Surveyed ................................... 103
IV-8. Criticality of Problem Areas in Selected Systems ................................ 109
LIST OF TABLES (con’t)

V-1. Possible Advantages and Disadvantages of Legislative Branch Options Short of New Authorizing Legislation .......................................................... 119
V-2. Possible Advantages and Disadvantages of Executive Branch Options Short of New Authorizing Legislation ................................. 120
V-3, Possible Advantages and Disadvantages of Options Through Legislation .... 121
V-4. Summary of Alternative Systems Approaches .................................. 123
V-5. Approach B Development Schedule ............................................. 149
V-6. Approach B Costs ................................................................. 150
V-7. Approach C Development Schedule ............................................. 151
V-8. Approach Costs .......... ................................................................ 152
VI-1. Possible Advantages and Disadvantages of a Materials Information Referral Office ........................................................................ 162
VI-2. Possible Advantages and Disadvantages of an Location in an Existing Executive Department or Agency .............................................. 165
VI-3. Possible Advantages and Disadvantages of a Location Within a New Natural Resources Department ............................................. 166
VI-4. Possible Advantages and Disadvantages of Location Within a New Statistical Agency ................................................................. 168
VI-5. Possible Advantages and Disadvantages of Location Within the Executive Office of the President ......................................................... 169
VI-6. Possible Advantages and Disadvantages of Location in an Independent Agency or Commission ......................................................... 170
VI-7. Possible Advantages and Disadvantages of Location in a Quasi-Governmental Institution .................................................................... 172
VI-8. Possible Advantages and Disadvantages of a Location Within the Legislative Branch or Private Sector ....................................................... 174
VI-9. Summary of the Institutional Arrangements ...................................... 180
VI-10. Summary of Key Components of Implementation Alternatives .......... 181
VI-11. Institutional Arrangements ............................................................ 182
A-1. Examples of Substitution Involving Various Classes of Materials ........ 230
A-2. Examples of Three Broad Classes of Substitution ............................. 231
A-3. Potential Users of Information on Substitution ................................ 231
A-4. Examples of Motivations for Substitution ....................................... 232
A-5. Information Requirements for Substitution Analysis ........................ 242
A-6. Information Requirements for Substitution Analysis: Those Specifically Required by Materials Users are Underlined ............................. 245
A-7. Information Requirements for Substitution Analysis: Those Specifically Required by National Policymakers are Underlined .................... 246
