

Contents

Chapter	Page
I. Summary	3
Health Impacts of Environmental Contamination.	4
Economic Impacts of Contamination.	4
Major Problems in Identifying Environmental Contaminants	5
Problems of Regulating Environmental Contaminants.	5
Findings and Conclusions	6
Congressional Options.	9
Option 1.--Maintain the Present System	9
Option 2.—Amend the Food, Drug, and Cosmetic Act	9
Option 3.—Establish an Investigatory Monitoring System.	10
Option 4.—Improve Federal Response to New Contamination Incidents	10
II. Environmental Contamination of Food.	15
How Food Becomes Contaminated	16
Magnitude of the problem	19
Evidence of Human Illness Resulting From Consumption of Contaminated Food.	19
Polychlorinated Biphenyls.	19
Polybrominated Biphenyls	20
Mercury and Methylmercury	21
Radioactivity	22
Number of Food Contamination Incidents.	23
Economic Impact	25
Costs of Food Condemned.	25
Health Costs.	26
Distributional Effects and Costs	27
Potential Food Contamination problems.	29
Conclusions and Issues	29
Chapter II References	30
111. Federal Laws, Regulations, and Programs”	35
Federal Laws.	35
Action Levels and Tolerances.	37
Criteria for setting Action Levels and Tolerances	38
Determining Action Levels and Tolerances	39
Evaluation of the Scientific Data.	39
Evaluation of Decisionmaking Approach	41
Federal Monitoring programs.	42
Food and Drug Administration	42
U.S. Department of Agriculture	43
Environmental Protection Agency	44
Critique of Federal Monitoring programs.	45
Chapter III References	46
IV. State Laws, Regulations, and Programs	49
State Laws	49
State Monitoring Programs	50
Federal/State Liaison.	52
Generating Information.	52
Chapter IV References.	55
V. Methods for Assessing Health Risks.	59
Possible Toxic Effects	59
Human Epidemiology.	60
Animal Tests and Other Methods for Toxicological Testing	62
The Carcinogen Bioassay.	62
Short-Term Tests for Mutagenesis and Potential Carcinogenesis.	63

Chapter	Page
Interactions of Two or More Substances	65
Extrapolating From High Doses to Low Doses.	67
Chapter Preferences	69
VI. Methods of Estimating and Applying Costs to Regulatory Decisionmaking . .	73
Cost Effectiveness	73
Cost-Benefit	76
Application of Methods for Regulation,	77
Chapter VI References.	78
VII. Monitoring Strategies	81
Strategies.	81
Regulatory Monitoring.	81
Investigatory Monitoring	81
Monitoring for Suspected Environmental Contaminants	82
Monitoring for Uncharacterized Environmental Contaminants	84
Specimen Banking	85
Sampling	86
Quality Assurance.	88
Chapter VII References.	89
VIII. Monitoring Instrumentation	93
Organic Environmental Contaminants	93
Analysis	93
Application to Investigatory Monitoring	96
Detecting and Quantifying Trace Metal Contaminants	97
Analysis	97
Application to Investigatory Monitoring	98
Speciation of Trace Metals	98
Analysis of Foods for Radioactivity.	99
Analysis	99
Applications to Investigatory Monitoring.	102
Estimated Cost to Equip a Laboratory to Conduct Investigatory Monitoring. .	103
Chapter VIII References	105
IX. Congressional Options.	109
Option 1—Maintain the Present System.	109
Option 2—Amend the Food, Drug, and Cosmetic Act.	110
Option 2A--Simplify Administrative Procedures.	110
Option 2B-Require reestablishment of Tolerances	110
Option 2C-Clarify the Role of Economic Criteria	111
Option 2D-Establish Regional Tolerances	111
Option 3-Establish an Investigatory Monitoring System	112
Option 3A-Establish a National Monitoring System for Suspected Environmental Contaminants.	112
Option 3B-Establish a National Monitoring System for Uncharacterized Environmental Contaminants.	113
Option 4—Improve Federal Response to New Contamination Incidents	113
Option 4A-Designate a Lead Agency	113
Option 4B-Establish a Center to Collect and Analyze Toxic Substances Data	114
Appendixes	
A. Substances Whose Production or Environmental Release Are Likely to Increase in the Next Ten Years	119
B. FDA Derivation of PCB Tolerance—Federal Register.	125

Contents--continued

Appendix	Page
C. Methods for Toxicologic Testing	137
D. Review and Evaluation of Methods of Determining Risks From Chronic Low-Level Carcinogenic Insult	154
E. Measuring Benefits and Costs	166
F. Priority Setting of Toxic Substances for Guiding Monitoring Programs	177
G. Approaches to Monitoring Organic Environmental Contaminants in Food	187
H. Analytical Systems for the Determination of Metals in Food and Water Supplies	195
I. Analysis of Foods for Radioactivity	215
J. Commissioned Papers	228
K. Executive Agency Observers at Advisory Panel Meetings	229

LIST OF TABLES

Table No.	Page
1. Reported Incidents of Food Contamination, 1968-78, by State and Class of Contaminant	16
2. Reported Incidents of Food Contamination, 1968-78, by State and Food	17
3. Number of Incidents of Environmental Contaminants of Food Reported by Federal Agencies, 1968-78	17
4. Radionuclide Contaminants of Significance for Foods	18
5. Methylmercury Concentrations in Normally Exposed Populations	22
6. Economic Impact of Food Contamination	26
7. Federal Laws and Agencies Affecting Toxic Substances Control	36
8. Program Areas and Expenditures for States	50
9. Number of Employees by Category and Education Level in Various State Food and Drug Programs	51
10. Salary Ranges of Various Chemical Personnel in State Food and Drug Programs	51
11. Physical Facilities and Key Equipment in 114 State Food and Drug Laboratories	51
12. Total Number of Samples, Sample Determinations, and Man-Hours by Food Commodity Categories With Number and Percentage of States Reporting Analytical Activity	52
13. Combined Effects of Cadmium, Mercury, and Lead	66
14. Virtually Safe Doses Computed From Three Different Data Sets and Three Different Models	68
15. Extra Lifetime Risks of Cancer Associated With Consumption of PCBs in Food	69
16. Impact of PCB Tolerance	74
17. Chemical Contaminants in Foods	83
18. Techniques Available for Qualitative and Quantitative Organic Analysis	95
19. Techniques Available for Qualitative and Quantitative Trace Metal Analysis	98
20. Typical Limits of Detection for Radionuclide Measurement	101
21. Estimated Costs to Equip a Laboratory to Conduct Uncharacterized Monitoring	104
A-1. Trapped Organic Compounds and Aromatic Units in Coal	123
D-1. Comparison of Lower 97.5-Percent Confidence Limit on Virtually Safe Doses From Gamma Multihit Model Given in to Virtually Safe Doses From Best Fitting Gamma Multihit Model With $k = 1$	164
G-1. Techniques Available for Qualitative and Quantitative Organic Analysis	188
G-2. Estimated Space, Manpower, and Cost Associated With the Analysis of Priority Pollutants in Tissue and Water Samples According to EPA Analytical Protocol	190
G-3. Estimated Space, Manpower, and Cost Associated With the Monitoring of Unknown Potentially Toxic Compounds in Addition to the EPA Priority Pollutants	192
H-1. Determination Limits for Neutron Activation Analyses	199
H-2. Determination Limits for Flame Atomic Absorption and Emission and Furnace Atomic Absorption	201

Table No.	Page
H-3. Multielement Atomic Emission Determination Limits for Two Common Plasma Excitation Systems.	204
H-4. Determination Limits for X-Ray Fluorescence Techniques.	205
H-5. List of Sample Preparation Facilities Required	209
H-6. Summary of Cost-Productivity Estimates for Various Analytical Techniques . . .	210
I-1. Costs for Space, Furnishings, Equipment, and Supplies	225

LIST OF FIGURES

Figure No.	Page
1. Distribution of PCB Contamination	8
2. Distribution of States Responding to Questionnaire	24
3. State Food Laws.	49
4. Scope of Investigation: Distribution of Materials	53
5. Steps in the Ames Spot Test.	65
6. A General Scheme for the Qualitative and Quantitative Analysis of the Organic EPA Priority Pollutants in Semisolid Foods	94
7. Comparison of the Gas Chromatographic Analysis of a Standard Mixture of Polychlorinated Biphenyls on Two Types of Gas Chromatographic Columns . . .	96
D-1. Illustration of Why the Dose-Response Curve Should Be Linear at Low Dose in the Presence of Background Carcinogenesis	156
D-2. Typical Fit of Mantel-Bryan Curve to Experimental Data	158
D-3. Comparisons of "Safe" Doses Computed From the Mantel-Bryan Procedure and From a Procedure Based on the Multistage Model	161
D-4a, Example of Data Exhibiting Downward Curvature	162
D-4b, Example of Data Exhibiting Upward Curvature.	162
E-1. Analysis of a Shift in Supply	170
G-1. A Simplified Diagram for the Qualitative and Quantitative Analysis of the Organic EPA Priority Pollutants	189
G-2. A General Scheme for the Qualitative and Quantitative Analysis of the EPA Organic Pollutants in Semisolid Foods	189
G-3. General Analytical Scheme To Detect and Monitor New Trace Organics and Priority Pollutants in Food and Water Samples	192
H-1. Flow Diagram of the General Operational Protocol of a Monitoring Laboratory	197
1-1. Comparison of Gamma Spectra Taken With a Sodium Iodide Detector and a Germanium Diode Detector.	222
