

Contents

Chapter	Page
1. Summary	3
Introduction	3
Technical options for Reducing Waste	4
Technical options for Reducing Losses From the Materials Cycle	4
Technical options for Reducing Excess Metal in the Materials Cycle	6
Summary of Technical options for Reducing Losses and Reducing Excess Metal	10
Preliminary Policy Considerations	13
Materials Objectives and Problems	13
Illustrative Implementation options	13
Summary	16
 II. Congressional Interest and Scope of Assessment.	 19
Original Congressional] Request	19
Definition of Materials Waste and Conservation	19
Scope of the Assessment.	20
Selection of Materials for Detailed Study ... ,	20
 III. Quantification of Losses From the Materials Cycle.	 25
Iron and Steel	26
Aluminum	28
Copper	30
Platinum-Group Metals	32
Manganese	34
Chromium ., , ,	36
Nickel	38
Tungsten.	40
Summary of Losses for Selected Metals	42
 IV. Identification of Technical Options for Reducing Losses From the Materials Cycle	 47
Unrecovered and Unknown Losses.	47
Losses in the Postconsumer Solid Waste Stream.	48
Losses in Dissipative Uses	48
Losses in Exports. ,	49
Losses in Milling and Concentrating of Ores.	49
Losses in Metal Processing	50
Losses in End-Product Manufacture.	50
Losses in Corrosion and Wear.	51
Losses in Nonmetallic Uses of Raw Materials	51
Summary of Technical Options.	51
 V. Design Review of Technical Options for Reducing Excess Material in the Cycle	 55
Methodology.	55
Design Review of Selected Products	56

VI. Analysis of the Most Significant Technical Options for Reducing Excess Metals Use.	63
Substitution	63
Product Recycling (Product Rework and Reuse, Component Remanufacture)..	64
Substitution in the Construction Industry	67
Eliminate Unnecessary Metal in Products	67
Extend Product Life.....	70
Extend Product Life of Refrigerators: An Example of Systems	
Dynamics Methodology	73
Reduced Use of Materials-intensive Systems, Such as Alloys.	75
Summary of Options and Potential Savings	80
VII. Preliminary Policy Considerations	83
Introduction: Materials Conservation Objectives.	83
Materials Availability Problems.	83
Chronic Lack of Capacity	84
Import Dependency.	84
Energy Conservation	84
Cyclical Instabilities.	84
Environmental Restrictions	86
Long-Term Depletion.	86
Technological Change	86
Matching Conservation Options to Materials Availability Problems	87
Illustrative implementation Options	89
Establish a Governmental Contingency Planning Function.	89
Establish a Public Data System.	90
Establish a Market for Contingency Shares Certificates.	91
Research and Development on Metal Substitution	92
Improve Product Aftermarket.	93
Establish Scrap Inventory.	97
Summary	97

Appendixes

A. Proceedings of a Workshop on Wear Control to Achieve Product Durability ,	101
B. Conservation in World War II: 1933-45	107
C. Conservation and Shortages: 1946-77	118
D. Glossary of Terms.	124
E. List of Working Papers	125

LIST OF TABLES

<i>Table No.</i>		<i>Page</i>
1.	Critical Materials	22
2.	1974 Distribution of Products Manufactured From Iron and Steel	26
3.	Obsolescence of Iron- and Steel-Containing Products in 1974	26
4.	Recycling and Recovery of Iron and Steel in 1974	26
5.	Products Manufactured From Aluminum in 1974	28
6.	Obsolescence of Aluminum Products in 1974	28
7.	Recycling and Recovery of Aluminum in 1974	28
8.	Distribution of Copper End Products to Major Use Categories in 1974	30
9.	Obsolescence of Copper-Containing Products in 1974	30
10.	Recycling and Recovery of Copper and Copper Alloys in 1974	30
11.	Products Manufactured From Platinum-Group Metals in 1974	32
12.	Obsolescence of Platinum-Group Products in 1974	32
13.	Recycling and Recovery of Platinum-Group Metals in 1974	32
14.	Products Manufactured From Chromium-Containing Materials in 1974	36
15.	Obsolescence of Chromium-Containing Products in 1974	36
16.	Recycling and Recovery of Chromium in 1974	36
17.	Estimated Nickel Embodied in End Products in 1974	38
18.	Products Manufactured From Tungsten-Containing Materials in 1974	40
19.	Estimated Amount of Tungsten That Became Obsolete in 1974 and the Amount Recovered and Recycled	40
20.	Quantities Lost From the Materials Cycle of Selected Metals, 1974	42
21.	Percentage Losses From the Materials Cycles of Selected Metals, 1974	43
22.	Options for Materials Conservation in Product Design, Manufacturing, and Use	55
23.	Products Selected as Case Examples	56
24.	Potential Metal Savings of Conservation Options for Selected Products	57
25.	Potential Metal Savings of Conservation Options	58
26.	Disposal Patterns of Selected Products in Percent of Total Disposals	67
27.	Opportunities for Saving Aluminum in the Construction Industry	68
28.	Opportunities for Saving Copper in the Construction Industry	68
29.	Opportunities for Saving Steel in the Construction Industry	69
30.	Construction Cost Estimates for a Metal-Free Building	69
31.	Summary of Refrigerator Materials Content	70
32.	Percent of Metal Saved Per Product Per Year	71
33.	Distribution of Metal Flows by Industry Sector	73
34.	Materials Usage in Alloys	79
35.	Metals Used With Steel as Alloys or Coatings	79
36.	Potential Savings From Technical Options by Reducing Excess Metal Usage	80
37.	Systems Analysis Concepts of Materials Efficiency, Stability, and Adaptability	87
38.	Materials Problems Require Improved Efficiency, Stability, and/or Adaptability	88
39.	Ability of Conservation Options to Improve Efficiency, Stability, and Adaptability	89
40.	Implications and Impacts of Recycling on the Materials Cycle	94
A-1.	Agenda for the Workshop on Wear Reduction	101
B-1.	Elements of the World War II Scenario	108
B-2.	Strategic and Critical Materials	109
B-3.	Status of Government Stockpiles	109
B-4.	Supply to the Military and Relevant Materials Policies	109
B-5.	National Objectives, Presidential Goals	110
B-6.	Munitions Production by Type	110
B-7.	Production of Selected Metals	110
B-8.	Estimated Economics of Substitution	112
B-9.	Examples of Impacted Stakeholders and Their Responses	116
C-1.	Copper Supply	120

LIST OF FIGURES

Figure No.		Page
1.	Metals Selected for Study.	4
2.	Typical Materials Cycle.	5
3.	Estimated Metal Losses for Each Loss Category, Expressed as a Percentage of Domestic Mill Shipments	6
4.	Technical Options for Reducing Losses in the Materials Cycle	7
5.	Classes of Excess Metal in the Materials Cycle.	8
6.	Products Selected for Study.	8
7.	Potential Savings From Technical Options by Reducing Excess Metal Usage, Expressed as a Percentage of Domestic Mill Shipments	9
8.	Summary of Technical Options for Reducing Losses and Reducing Excess Metal	11
9.	Ability of Conservation Options to Meet Selected Materials Objectives	14
10.	Energy Intensity at Each Stage of the Materials Cycle.	15
11.	Context of Assessment	21
12.	Typical Materials Cycle.	25
13.	iron and Steel Cycle: Flows and Losses, 1974	27
14.	Aluminum Cycle: Flows and Losses, 1974	29
15.	Copper Cycle: Flows and Losses, 1974	31
16.	Cycle for Platinum-Group Metals: Flows and Losses	33
17.	Manganese Cycle: Flows and Losses, 1974	35
18.	Chromium Cycle: Flows and Losses, 1974	37
19.	Nickel Cycle: Flows and Losses, 1974.	39
20.	Tungsten Cycle: Flows and Losses, 1974	41
21.	Recycling of Obsolete Scrap.	47
22.	Technical Options for Reducing Losses in the Materials Cycle	52
23.	Methodology for Evaluating Options for Reducing Excess Material in the Cycle	55
24.	Typical Disposal Pattern for Refrigerators.	66
25.	Refrigerator Weight Reduction for Different Models as a Function Time	71
26.	Overview of Refrigerator Model Structure.	74
27.	Refrigerator Model: Longer Mechanical Lifetime Case, Refrigerator Lifetime Over Time.	76
28.	Refrigerator Model: Longer Mechanical Lifetime Case, Employment and Sales Over Time	77
29.	Refrigerator Model: Longer Mechanical Lifetime Case, Aluminum and Copper Consumption Over Time.	78
30.	Energy Intensity at Each Stage of the Materials Cycle.	85
B-1.	Gross National Product, World War II.	108
B-2.	Conservation Policies During World War II.	111
c-1.	Metal Shortages 1939-77	119
