

# Contents

<i>Chapter</i>	<i>Page</i>
<b>I. Summary of Findings</b> . . . . .	3
Discussion. . . . .	8
Current State of Technology . . . . .	8
Variable-Cycle Engine . . . . .	9
Technology Validation Program . . . . .	10
Fuel Considerations. . . . .	10
Financing Considerations . . . . .	11
Foreign Competition. . . . .	11
Energy Issues: Availability and Price of Fuel . . . . .	13
Environmental Issues: Noise, Sonic Boom, and Atmospheric Pollution.. . . .	14
World Requirements for New Aircraft . . . . .	16
Societal Concerns . . . . .	17
Study Findings in Brief . . . . .	18
<b>II. Advanced High-Speed Aircraft: The Next 30 Years</b> . . . . .	21
Outlook for New Aircraft Types . . . . .	22
World Requirements for New Aircraft . . . . .	25
Beginnings of Supersonic Transport—The Concorde, . . . . .	25
The American Supersonic Transport (SST) Program. . . . .	28
Current Status of Supersonic Technology . . . . .	33
Variable-Cycle Engine . . . . .	33
Technology Validation Program . . . . .	34
Prospective Issues. . . . .	34
<b>III. Variables Affecting a Supersonic Transport Market</b> . . . . .**	39
The Path to Improved Productivity. . . . .	39
Cost of Productivity for Supersonic Aircraft . . . . .	41
The Impact of Quantity . . . . .	43
The Potential Market . . . . .	4.5
Energy Uncertainties . . . . .	48
Stage Lengths and Environmental Conditions. . . . .	48
The Cost of Environmental Acceptability . . . . .	49
<b>IV. Prospects for Future Long-Range Aircraft: Five Scenarios</b> . . . . .	53
Projected Fleet Size . . . . .	54
Types of Aircraft. . . . .	56
Scenarios. . . . .	57
<b>V. Economic Issues: An Analysis</b> . . . . .	63
Assumptions. . . . .	63
Results . . . . .	64
The Effects of Competition . . . . .	66
<b>VI. Energy: Fuel Price and Availability</b> . . . . .	69
Present Fuel Consumption. . . . .	69
Fuel Price Effects . . . . .	70
Comparative Fuel Efficiency . . . . .	71
Analysis of Energy Impacts . . . . .	72

Contents—continued

<i>Chapter</i>	<i>Page</i>
Alternative Fuels . . . . .	75
Application to Supersonic Transports . . . . .	79
<b>VII. Environmental Issues . . . . .</b>	<b>85</b>
Noise . . . . .	85
Sonic Boom Effects . . . . .	87
Emissions . . . . .	89
Cosmic Ray Exposure . . . . .	90
Summary . . . . .	90
<b>VIII. Supersonic Transportation and Society . . . . .</b>	<b>93</b>
Impact of Increased Long-Distance Travel . . . . .	93
Communications and Transportation . . . . .	94
The Future Environment . . . . .	95
<b>IX. Competitive Considerations and Financing . . . . .</b>	<b>99</b>
Identification of the Technology . . . . .	101
Alternative Strategies . . . . .	103
Beyond Technology Readiness . . . . .	104

LIST OF TABLES

<i>Table No.</i>	<i>Page</i>
1. World Requirements—New Aircraft . . . . .	3
2. NASA Supersonic Cruise Research Program R&D Expenditures . . . . .	33
3. Progress in Aircraft Productivity . . . . .	40
4. Free-World Commercial Jet Fleet With and Without ASTs—Year 2010 . . . . .	55
5. Characteristics of Four Projected Aircraft Types . . . . .	56
6. Economic Impacts . . . . .	64
7. Present and Projected Commercial Air Service and Fuel Consumption . . . . .	70
8. Estimated Fuel Efficiency of Advanced Subsonic and Supersonic Aircraft . . . . .	72
9. Energy Impacts of AST-III: Scenario 1 . . . . .	73
10. Energy Impacts of AST-I and AST-III: Scenario 3 . . . . .	73
11. Energy Impacts of AST-II or AST-III: Scenario 4 . . . . .	74
12. Summary of Energy Impacts . . . . .	74
13. Properties of Some Candidate Fuels . . . . .	76
14. Comparison of a Supersonic Transport Aircraft Fueled With Liquid Hydrogen or Jet A Fuel . . . . .	80
15. Advantages and Disadvantages of Liquid Hydrogen Compared to Synthetic Jet Fuel . . . . .	80

LIST OF FIGURES

<i>Figure No.</i>	<i>Page</i>
1. Aircraft Productivity . . . . .	4
2. Relative Total Costs of Supersonic and Subsonic Aircraft . . . . .	5
3. Effect of Fuel Price on Aircraft Operating Cost . . . . .	13
4. The Relationship of Aircraft Productivity and Costs . . . . .	40
5. Influence of Speed on Aircraft Productivity and Costs . . . . .	42
6. History of Direct Operating Costs, 1930-75 . . . . .	43
7. Influence of Market on Unit Cost . . . . .	44

## Contents—continued

<i>Figure No.</i>	<i>Page</i>
8. Relationship of Aircraft Productivity, Technology, and Costs . . . . .	45
9. AST Market Shares, New York-Paris Route in 1995 . . . . .	46
10. Impact of Relative Fares on Fleet Mix, New York-Paris Route in 1995. ....	47
11. Commodity Input to U.S. Balance of Trade—1977. . . . .	54
12. Scenario Timetables . . . . .	57
13. Time Between Introduction of AST-I and AST-III v. Market Split . . . . .	66
14. The Price of Coal-Derived Aviation Fuels as a Function of Coal Cost . . . . .	78
15. The Cost and Uncertainty of Noise Reduction . . . . .	87
16. Predicted Effect of Improved Aircraft Technology on the Ozone Layer. . . . .	90
17. Average Auto Trip Rate v. Trip Time. ., . . . . .	95
18. Long-Term Economic Trends . . . . .	96
19. Typical Aircraft Cash Flow Curve . . . . .	100
20. Phases of Advanced Transport Development (SCR) . . . . .	103
21. Cost of a Representative AST Program. . . . .	104
