EFFECTIVE STRATEGIES FOR K THROUGH 20 EDUCATION

Richard M. Charles
Math Learning Institute
richard.charles@attbi.com

The recent legislation entitled “No Child Left Behind” is setting forth new requirements in K-12 education. This talk will provide an overview of the issues in K-12 math education affecting student achievement and teacher performance. Its purpose is also to provide a basis for developing a better understanding of the requirements necessary for teacher training and analysis of student data. Several strategies are proposed in order to address the challenges resulting from the impact of the new legislation on higher education.
