Homework 7

1. Suppose that our language has the predicate symbols $F, G, H$ and the names $m, n$. Let $\mathcal{I}$ denote the interpretation of this language given by:

$$\begin{align*}
\text{DoQ} &= \{1, 2, 3, 4, 5\} \\
\text{Ext}(Fx) &= \{1, 2, 3\} \\
\text{Ext}(Gx) &= \{4\} \\
\text{Ext}(Hx) &= \{5\} \\
\text{Ref}(m) &= 2 \\
\text{Ref}(n) &= 4
\end{align*}$$

Determine if the following sentences are true or false relative to $\mathcal{I}$.

(a) $\forall x (\neg Fx \lor \neg Gx)$

(b) $\forall x ((Gx \land Fx) \rightarrow Hx)$

(c) $\neg \forall x Fx \rightarrow \exists x (Fx \land Gx)$

(d) $\neg Gm \land \exists x(Fx \land Gn)$

(e) $\exists x(Fx \rightarrow Gx)$

2. Give counterexamples to the following invalid argument forms. You do not need to show your work, but you do need to present an interpretation, and explain how it solves the problem.

(a) $\forall x(Fx \rightarrow Hx) \vdash \forall x((Fx \lor Gx) \rightarrow Hx)$

(b) $\exists x(Fx \rightarrow Gx), \exists x Fx \lor \exists x Gx \vdash \exists x Fx \rightarrow \exists x Gx$

3. Determine if the following arguments are valid. If you say that an argument is valid, explain how you know that fact. If you say that an argument is invalid, provide a counterexample.

(a) $\forall x(Fx \rightarrow Gx), \exists x(Gx \land Hx) \vdash \exists x(Fx \land Hx)$

(b) $\forall x((Fx \land Gx) \rightarrow Hx), \exists x Fx \vdash \neg \forall x Gx \lor \exists x Hx$
