Chapter	Page
I. SUMMARY	3
II. INTRODUCTION,	9
II.1. ISSUES AND FINDINGS,	15
IV. COAL SLURRY PIPELINE AND UNIT SYSTEMS	27
Technology Description	27
Pipelines	27
Unit Trains.	29
Coal Transportation Market	33
Major Factors Influencing Coal Usage.	34
Scenario Description	37
Results.	41
Cost Comparisons and Traffic Assumptions	48
costs	48
Traffic Assumptions,	55
V. ECONOMIC IMPACTS.	63
Introduction	63
Objectives.	63
Methodology.	64
Rail Cost and Price Alternatives	66
Alternative Inconstant Rate and Cost Structure	67
Alternative II—Fuel Cost Adjustment	68
Alternative III—Historical Rate Decline.	68
Alternative IV—Constant Operating Ratio	70
Alternative V—Minimum Necessary Net Income	70
Pipeline Impact Analysis	74
Lost Rail Tonnage	74
System Costs	80
Economic impacts of Water Resource Allocation.	84
VI. ENVIRONMENTAL AND SOCIAL IMPACTS.	87
Introduction	87
Water Use by Pipelines	88
Water for the Wyoming Pipeline.	91
Water for the Montana Pipeline	100
Water for the Tennessee Pipeline	100
Water for the Utah Pipeline.	102
Alternative Water Supply Sources.	103
Coal-Water Interaction and Corrosion.	104
Slurry Water Reuse and Impacts	105

Contents—continued

Chapter	Page
Community Disruption by Railroads.	106
Construction Impacts	109
Operational Impacts.. . . .	114
Air	114
Dust Emissions	116
Disruption of Biological Communities.	117
Energy/Materials Requirements	120
Occupational Health and Safety	121
VII. LEGAL AND REGULATORY ANALYSIS	125
Introduction	125
Legal Provisions Which Favor Pipelines	125
Legal Provisions Which Favor Railroads	126
Transportation Regulation	127
Water Law	130
Environmental Law...	132
Eminent Domain	133
APPENDIX—BASELINE RAIL REVENUE AND COST PROJECTIONS	141
Rail Revenue Projections.	141
Rail Operating Expenditure Forecasts	146
Capital investment Requirements	150
Employment and Compensation	153
Tax Forecasts	155

LIST OF TABLES

Table Number	Page
1. Summary of Selected Worldwide Commercial Slurry Pipelines	32
2. Coal Supply Regions.. . . .	34
3. Assigned Coals, by State, "No Cleaning" Scenarios (1975)	36
4. Scheduled Additions to Capacity, for the Decade 1976-85, as of April 1, 1976, as Reported by Nine Regional Reliability Councils	38
5. Planned Additions to Capacity for the Decade 1986-95, as of April, 1976, as Reported by Nine Regional Reliability Councils.	39
6. Projected Regional Utility Coal Production	42
7. Projected Utility Coal Distribution From Region of Origin to State of End Use.....	43
8. Sample Hypothetical Case Results	53

LIST OF TABLES—Continued

<i>Table Number</i>		<i>Page</i>
9.	Pipeline Traffic Scenario.	58
10.	Comparative Railroad Revenue and Operating Cost Projections – Alternative	68
11.	Comparative Railroad Revenue and Operating Cost Projections— Alternative II.	69
12.	Comparative Railroad Revenue and Operating Cost Projections – Alternative III.	69
13.	Comparative Railroad Revenue and Operating Cost Projections— Alternative IV.	70
14.	Operating Income Projections for Southern and Western Railroads— Alternatives I to IV	72
15.	Minimum Necessary Net Income for Southern and Western Railroads	73
16.	Rail Revenues Necessary To Maintain Minimum Necessary Net Income on Western Railroads	73
17.	Lost Tonnage Impacts Upon Railroad Operating Costs.	75
18.	Lost Tonnage Impacts Upon Net Railway Operating Revenues	75
19.	Lost Tonnage Impact Upon Railroad Rolling Stock Requirements	76
20.	Lost Tonnage Impact Upon Railroad Investment Requirements.	76
21.	Lost Tonnage Impact Upon Railroad Employment and Compensation by Route	78
22.	Railroad Operating Income 1980-2000—Lost Tonnage Scenario	79
23.	Rail Revenues To Maintain Minimum Necessary Net income on Western Railroads—Lost Tonnage Scenario.	80
24.	Sensitivity of Potential Net Savings From Hypothetical Cost Slurry Pipeline Development	82
25.	Water Requirements for Hypothetical Coal Slurry Pipelines	88
26.	Water-Use Equivalents for Hypothetical Pipelines.	90
27.	Selected Data From Madison Formation Wells and Springs, Powder River Basin, Wyo.	95
28.	Estimated Water Obtained From Madison Wells	100
29.	Uses of Madison Ground Water in Wyoming, 1973.	100
30.	Water Supply and Demand, Bighorn River Basin, Mont.. . . .	100
31.	EPA Discharge Standards for New Sources, Steam Electric Power Generating Point Source Category	105
32.	Predicted injuries and Deaths Based on Present and Hypothetical Train Traffic Levels	107
33.	Annual Added Vehicle Operation Costs (1974 Dollars) and Travel Time Due To Increased Coal Train Traffic	107
34.	Summary of Noise Levels identified by EPA as Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety.	108
35.	Population Exposed to Noise Levels Exceeding EPA Community Noise Guidelines Along Case Study Routes	109
36.	Agricultural Land Use Along Hypothetical Wyoming-Texas Pipeline Route.	113
37.	Diesel Locomotive Emission Factors.	115

LIST OF TABLES—Continued

<i>Table Number</i>	<i>Page</i>
38. Estimation of Vehicle Equivalent Diesel Locomotive Air-Pollutant Emissions for 65 Million Tons of Coal per Year Between Wyoming and Texas	115
39. Worst Case Ambient Air-Pollutant Concentrations for Unit Trains Carrying 65 Million Tons of Coal per Year From Wyoming to Texas	116
40. Wildfire Occurrence in Nebraska, 1971-76.	119
41. Wildfire Occurrence in Campbell and Converse Counties, Wyo., 1971 -73	119
42. Acreage Burned by Wildfires in Nebraska, 1971 -76.	119
43. Steel and Energy Requirements for the Case Study Pipelines	120
44. Steel and Energy Requirements of the Railroad Case Studies.	121
45. Predicted Occupational Injuries and Lost Workdays From Case Study Pipeline Construction and Operation	122
46. Predicted Occupational Injuries, Lost Workdays, and Deaths From Case Study Unit Train Service Expansion	122

Appendix Tables

A-1. Historical and Projected Regional Revenue Shares by Commodity.	142
A-2. Baseline Regional Railroad Revenue Projections	144
A-3. Historical and Projected Freight Car Loadings by Commodity	148
A-4. Projections of Class I Railroad Operating Expenditures	149
A-5. Rolling Stock Investment Requirements, 1975-2000	151
A-6. Cumulative Way and Structures Investment Requirements for Specific Long-Haul Coal Shipments.	152
A-7. Class I Railroad Labor Compensation Projections, 1980-2000	154
A-8. Class I Railroad Employment Projections, 1980-2000	154

LIST OF FIGURES

<i>Figure Number</i>	<i>Page</i>
1. Present and Proposed Coal Slurry Pipelines	28
2. Schematic of Slurry Pipeline System.	29
3. Coal Supply Regions.. . . .	35
4. Regional Reliability Councils of the National Electric Reliability Council	39
5. Year 1980 Potential Utility Coal Movements of More Than 5 Million Tons per Year Over Distances Greater Than 200 Miles	46
6. Year 1985 Potential Utility Coal Movements of More Than 5 Million Tons per Year Over Distances Greater Than 200 Miles	46
7. Year 1990 Potential Utility Coal Movements of More Than 5 Million Tons per Year Over Distances Greater Than 200 Miles	47
8. Year 1995 Potential Utility Coal Movements of More Than 5 Million Tons per Year Over Distances Greater Than 200 Miles	47
9. Year 2000 Potential Utility Coal Movements of More Than 5 Million Tons per Year Over Distances Greater Than 200 Miles	48

LIST OF FIGURES—Continued

<i>Figure Number</i>		<i>Page</i>
10.	Slurry Facility First Costs.	50
11.	Pipeline First Costs	51
12.	Annual Operation and Maintenance Costs, Slurry Preparation Facility . .	51
13.	Annual Operation and Maintenance Costs, Slurry Dewatering Facility . . .	51
14.	Annual Operation and Maintenance Costs per Pumping Station . .	51
15.	Form of Typical Rail and Pipeline Cost Ranges for a Given Annual Tonnage	55
16.	Results of Previous Coal Slurry Pipeline Cost Studies	56
17.	Results of Previous Coal Unit Train Cost Studies	57
18.	Results of Case Studies Comparing Coal Slurry Pipeline and Unit Train Costs	58
19.	Rail Versus Pipeline Cost Indifference Curves Based Upon Site-Specific Case Study Conditions	58
20.	Transmission Water Requirements as a Function of Coal Throughput Moisture Content	88
21.	Outcrops and Subsurface Extent of Madison Limestone and Major Tectonic Features	92
22.	Configuration of the Top of the Madison Group.	93
23.	Depth From Land Surface to the Madison Limestone and Equivalent Rocks in the Powder River Basin and Adjacent Areas	94
24.	Potentiometric Surface of the Madison in Eastern Wyoming, Southeastern Montana, and Western South Dakota.	97
25.	Potential Drawdown of Potentiometric Surface Near Edgemont and Provo, S. D., According to 15,000 Acre-Feet per Year Withdrawal From the Madison Formation in Niobrara County, Wyo., According to Different Models	98
26.	Potential Drawdown of Potentiometric Surface Near Newcastle and Osage, Wyo., Due to 15,000 Acre-Feet per Year Withdrawal From the Madison Formation in Niobrara County, Wyo., According to Different Models .	99
27.	Proposed Aqueducts, Bighorn River to Colstrip	101
28.	Typical Pipeline Construction Spread.	110
