

Contents

Chapter	Page
I. Summary	1
Glossary	2
Introduction	3
How the drugs Are Used	4
Benefits.	5
Risks From Continued Use of the Drugs	5
Carcinogenic Drug Residues	7
Assessing and Quantifying Risks and Benefits	8
Current Regulatory Policy	9
Findings and Conclusions.	9
Congressional Options	11
II. Federal Regulation.	15
Regulatory Basis.	17
Current Activities.	19
Approved Uses	22
III. Benefits	27
Antibacterial	29
Mode of Action	29
Effectiveness.	30
Effect on Production.	32
Diethylstilbestrol (DES)	36
Mode of Action	36
Effectiveness.	37
Effect on Production.	37
IV. Risks.	39
Infectious Diseases.	41
Antibiotic-Related Risks	41
Risks From Infectious Diseases	42
Magnitude of the Risk.	44
Drug Residues.	46
Types of Risk.	46
Noncarcinogenic Risks	46
Carcinogenic Risks.	47
General Consideration	47
Quantification of Risk	50
Diethylstilbestrol (DES).	53
Nitrofurans.	55
Appendix	
Commissioned Papers	63
References	64

LIST OF FIGURES

Figure No.	Page
1. Comparisons of Safe Doses Computed From the Mantel-Brvan Procedure and From a Procedure Based on the Multistage Model.	53

LIST OF TABLES

Table No.	Page
1. Approved Uses for Penicillin in Chicken Feeds	23
2. Approved Uses for Penicillin in Turkey Feeds	23
3. Approved Uses for Penicillin in Swine Feeds	23
4. Approved Uses for Tetracycline in Chicken Feeds	24
5. Approved Uses for Tetracycline in Turkey Feeds	24
6. Approved Uses for Tetracycline in Swine Feeds	24
7. Approved Uses for Tetracycline in Cattle and Sheep Feeds	24
8. Approved Uses for Sulfa in Animal Feeds	25
9. Approved Uses for Nitrofurans in Animal Feeds	25
10. Approved Uses for Diethylstilbestrol in Food Animals	25
11. Effect of Chlortetracycline on Weight Gains of Pigs in Different Environments.	30
12. Response of Chicks to Chlortetracycline (CTC) and Penicillin in New and Previously Used Environment	30
13. Relationship Between Growth Rate of Control Animals and Animals Fed Antibiotics (Pigs).	31
14. Relationship Between Growth Rate of Control Pigs and Pigs Fed a Combination of Penicillin and Streptomycin	31
15. Effect of a "Nonspecific Infection" on Chick Growth.	31
16. Response of Pigs to Antibiotics	33
17. Continued Effectiveness of Tetracycline in Swine	33
18. Response of Chickens to Antibiotics	33
19. Improvement in Chick Performance: All Years Versus Since 1970,	33
20. Effect of Selected Antibiotics on Egg Production, Feed Per Dozen Eggs, and Matchability.	33
21. Response of Turkeys to Antibiotics.	34
22. Production of Meat Animals, 1976	34
23. Estimated Percentage Change in Livestock Production From Banning Selected Antibiotics	35
24. Estimated Decrease in Livestock Production From Banning Selected Antibiotics	35
25. Percent Change in Quantity of Meat From a Ban on the Use of Selected Antibiotics	36
26. Percent Change in Farm Prices From a Ban on the Subtherapeutic Uses of Selected Antibiotics	36
27. Percent Change in Retail Price From a Ban on the Subtherapeutic Uses of Selected Antibiotics	36
28. No Drug Versus MGA Versus DES Versus Estrogen Implant.	38
29. Percent Changes on the Supply, Farm Prices, and Retail Prices of Beef From a DES Ban	38
30. Homology Between Plasmids of Animal and Human Origin.	44
31. Antibiotic Resistance in Salmonella Isolated From Hospitalized Patients	45
32. Incidence of Violations Among Different Antibiotics in Kidneys From Food Animals.	48
33. Occurrence and Latent Periods of Mammary Carcinoma in Mice Fed Varying Concentrations of DES in the Diet.	54
34. Extra Risk of Mammary Tumors at a Dose of 0.02 ppb.	55
35. Estimates of Dosage (ppb) of DES Required To Effect an Added Carcinogen Response of $1/10^6$	55
36. Summary of Tumorigenic and Carcinogenic Results From Four Experiments With Furazolidone.	56
37. Levels of Significance of Various Goodness-of-Fit Tests Performed on Data in Table 36.	56
38. Estimates of Extra Risk From a Dose of Two Parts Per Billion of Furazolidone Using the Data in Table 36	57
39. Estimates of Dose in Parts Per Billion of Furazolidone Required To Produce an Extra Risk of $1/10^6$ Using the Data in Table 36	58
