Executive Summary	3	Apple in the North.	36
Introduction.	3	Pests of Apple	37
Discussion	4	Chemical Pesticide Use	37
Present Pest Control Tactics and		Cultural Pest Control.	38
Problems	4	Plant Resistance	38
Fifteen-Year Projection for Crop		Biological Control	39
Protection.	4	Other Control Tactics	39
Integrated Pest Management	5	Current Use of Pest Management	
Present State of Implementation		Systems	39
of IPM.	5	Present Problems and Concerns in	
Transfer of IPM Technology to the		Crop Protection on Apple.	41
Developing World	6	Potato in the Northeast	42
Major Findings and Conclusions.	6	Pests of Potato in the Northeast	42
Congressional Options	7	Chemical Pesticide Use	43
Option I: Status Quo	7	Cultural Pest Control.	44
Option 2: Accelerate the Shift to		Plant Resistance	44
Integrated Pest Management	7	Biological Control	44
I. Historical Perspective on Crop		Organic Farming.	44
Protection	11	Other Control Practices.	44
II. Present Status of Crop Protection	19	Current Use of Pest Management	
Wheat in the Great Plains.	20	Systems	44
Pests of Wheat.	21	Present Problems and Concerns in	
Chemical Pesticide Use	21	Crop Protection on Potatoes	45
Cultural Pest Control.	21	California Vegetables	45
Plant Resistance	21	Pests of California Vegetables	46
Biological Control	23	Chemical Pesticide Use	47
Organic Farming.	23	Cultural Pest Control.	49
Other Control practices.	23	Plant Resistance	50
Current Use of Pest Management		Biological Control	50
Systems	23	Organic Farming.	50
Corn in the Corn Belt.	25	Other Control Tactics	51
Pests of Corn	25	Current Use of Pest Management	
Chemical Pest Control.	26	Systems	51
Cultural Pest Control.	26	Present Problems and Concerns in	
Plant Resistance	28	Crop Protection on California	
Biological Control	28	Vegetables	51
Organic Farming.	28	Cotton and Sorghum in Texas	51
Other Control Tactics	29	Pests of Cotton and Sorghum.	51
Current Use of Pest Management		Chemical Pesticide Use	52
Systems	29	Cultural Pest Control.	54
Present Problems and Concerns in		Plant Resistance	55
Crop Protection on Corn	29	Biological Control	55
Soybean in the Southeast	31	Other Control Tactics	55
Pests of Soybean	31	Current Use of Pest Management	
Chemical Pesticide Use.	32	Systems	56
Cultural Pest Control.	34	Present Problems and Concerns in	
Plant Resistance	34	Crop Protection on Cotton and	
Biological Control	35	Sorghum in Texas	56
Current Use of Pest Management		III. Fifteen-Year Projection of Agricultural	
Systems	35	pest Control in the United States	59
Present Problems and Concerns in		IV. Present Problems, Concerns, and Most	
Crop Protection on Soybeans.	36	Promising Approaches	71

Chapter	Page	Chapter	Page
Specific Areas of Crop Protection.	71	Increased Support for and	
Cultural Controls.	71	Reorganization of Biological	
Host-Plant Resistance	72	Control Efforts,	104
Biological Controls. ,	73	Increased Support for Host-Plant	
Quarantine ,	74	Resistance	104
Eradication ... , ,	74	Increased Flexibility in Pesticide Use	104
Pesticides.	75	Incentives for the Development of	
General Problems and Concerns.	77	Low-Sales-Volume, Selective	
Pest-Caused Losses , ,	77	Pesticides,	105
Instability of Pests and Pest Control		Development of a Uniform National	
Tactics. , ,	78	Cancer Policy.,	106
Inadequate Information to Develop		Develop Efficient Pest Management	
and Implement Effective Pest		Delivery Systems ... ,	107
Management Systems ,	78	Support of Public Delivery Systems .	107
Lack of Manpower. ,	79	Foster Private Sector Delivery	
Lack of Alternatives to Chemical		Systems ,	107
Pesticides, ... , ,	79	Develop a Nationally Coordinated	
Most Promising Approaches..	80	Monitoring Program	108
V. Obstacles to the Development and		Provide Trained Manpower and	
Adoption of Improved Pest Control		Training Programs,	109
Tactics and Pest Management		Support for Pest Management	
Strategies	85	Training Programs. ,	109
Technological Obstacles, ... ,	85	Competitive Study Leave Grants ...	110
Inadequate Knowledge Base,.	85	Reducing Manpower Requirements .	110
Narrow Range of Control Tactics. . .	86	Establish Regional Pest Management	
Lack of Adequate Delivery Systems .	89	Study Centers.. , ... ,	111
Lack of an Environmental Monitoring		Overcome Grower Skepticism. ,	111
System , , . , . , ,	91	Education. ,	111
Lack of Pest Management Training		Providing Incentives ... ,	111
Programs and Trained Manpower	92	Regulating Grower Involvement	111
Grower Skepticism ,	93	Improve Cooperation and Coordination	111
Administrative Obstacles	93	Mechanisms to Coordinate Efforts of	
Lack of Cooperation and		Federal Agencies. , ,	112
Coordination.	93	Cooperation and Coordination	
Within the Federal Government . .	96	Between Federal and State	
Between the Federal Government		Agencies. , , ,	113
and the States. ,	96	Coordination and Cooperation

Control Tactics	103	Transfer to Developing Countries ,,	121

Contents-continued

Chapter	Page
Potential Impact of Pest Control Technology Transfer	122
Strategies in the Adaption of Improved Pest Management Programs in the Developing World	123
U. S. Programs	124
Options for Congress to Improve Crop Protection in the Developing World,	125
Support Education and Training of LDC Crop Protection Scientists . . .	125
Agromedical Training for In-Country Personnel,	125
Integrated Pest Management Workshop	125
Provide the Less-Developed Countries With Pest Management Information	126
Establish Research Projects and Develop Pest Management Systems	126
Provide Support for Crop Protection in the Title XII Program.	126
Bibliography	129

LIST OF TABLES

Table No.	Page
1. Principal Control Tactics Used Against Major Pests of the Seven Regional Cropping Systems	4
2. Control Tactics Now Employed Against Major Pests of Wheat in the Great Plains	22
3. Control Tactics Now Employed Against Major Pests of Corn in the Corn Belt	27
4. Control Tactics Now Employed Against Major Pests of Soybean in the Southeast	33
5. Control Tactics Now Employed Against Major Pests of Apple	38
6. Control Tactics Now Employed Against Major Pests of Potatoes in the Northeast.	43
7. Control Tactics Now Employed Against Major Pests of Lettuce in California	47
8. Control Tactics Now Employed Against Major Pests of Melons in California	48
9. Control Tactics Now Employed Against Major Pests of Potatoes in California	48
10. Control Tactics Now Employed Against Major Pests of Strawberries in California.	49

Table No.	Page
11. Control Tactics Now Employed Against Major Pests of Tomatoes in California . . .	49
12. Control Tactics Now Employed Against Major Pests of Cole Crops in California . .	50
13. Control Tactics Now Employed Against Major Pests of Cotton in Texas	53
14. Control Tactics Now Employed Against Major Pests of Sorghum in Texas	54

LIST OF FIGURES

Figure No,	Page
1. Diagrammatic Concept of an Agroecosystem,	15
2. Volume of Pesticides Used on U.S. Farms	19
3. Number of Pesticides introduced Each Year From 1930,	19
4. Schematic Projections for Three Crop Protection Scenarios for Wheat in the Great Plains	60
5. Schematic Projections for Three Crop Protection Scenarios for Corn in the Corn Belt	60
6. Schematic Projections for Three Crop Protection Scenarios for Soybeans in the Southeast	60
7. Schematic Projections for Three Crop Protection Scenarios for Apples in the North	60
8. Schematic Projections for Three Crop Protection Scenarios for Potatoes in the Northeast.	61
9. Schematic Projections for Three Crop Protection Scenarios for Lettuce in California.	61
10. Schematic Projections for Three Crop Protection Scenarios for Melons in California.	61
11. Schematic Projections for Three Crop Protection Scenarios for Potatoes in California	61
12. Schematic Projections for Three Crop Protection Scenarios for Strawberries in California.	62
13. Schematic Projections for Three Crop Protection Scenarios for Tomatoes in California	62
14. Schematic Projections for Three Crop Protection Scenarios for Cole Crops in California	62
15. Schematic Projections for Three Crop Protection Scenarios for Cotton in Texas	62
16. Schematic Projections for Three Crop Protection Scenarios for Sorghum in Texas	63

Contents

Volume II—Working Papers

(Note: Volume 11 is the collection of in depth studies from which volume I was prepared. The contents are listed here as an aid to those who need additional details. It is available from the U.S. Government Printing Office, Superintendent of Documents, Washington, D.C. 20402, GPO stock no. 052-003 -00709-6.)

National Constraints

The Great Plains Wheat Belt

The Central Corn Belt

Soybeans in the Southeast

Northern Deciduous Tree-Fruits

Northeastern Potatoes

California Vegetables

Cotton and Sorghum Pests in Texas

Transfer of North American Crop Protection Technology to the Third World

Appendixes

- A. Transcript of Proceedings—Public Participation Meeting on Pest Management Strategies in Crop Protection, November 16-17, 1978
- B. Public Participation in OTA's Pest Management Assessment—J.B. Cordaro
- C. European Parasite Laboratory
- D. Comments on Perceived Issues of the Public Hearing on Pest Management Strategies—Virgil H. Freed
- E. Statement of Paul Merrell to the Office of Technology Assessment Public Participation Meeting
