

Contents

<i>Chapter</i>	<i>Page</i>
1. FINDINGS, ISSUES, AND OPTIONS	3
Findings	4
General and Productivity Effects	4
Cost Effectiveness for the General Population	4
Cost Effectiveness for Medically High-Risk Populations Only	4
Factors That Affect Cost Effectiveness	5
Issues	5
Options	7
2. THE COST-EFFECTIVENESS ANALYSIS: DATA, METHODS, AND RESULTS	13
Influenza	13
Clinical Description	13
Diagnosis and Treatment	13
Influenza Morbidity and Mortality	13
Influenza Vaccine	14
Influenza Vaccination Strategies	15
Medical Risk Strategy	15
Socioeconomic Risk Strategy	15
School Children Strategy	15
Cost-Effectiveness Analysis	15
Measurement of Health Effects and Medical Care Costs Associated With Influenza Vaccination	16
Simulating the Effects of Influenza Vaccinations for Years 1971-72 Through 1977-78	16
Quantifying Morbidity and Mortality Related to Influenza	16
Health Effects	17
Medical Care Costs	17
Health Effects and Medical Care Costs Over Time	18
Work, Housekeeping, and School Loss	18
Cost-Effectiveness Equation and Model	18
Base Case and Sensitivity Analysis	19
Results	20
Base Case	20
Sensitivity Analysis	21
Effect of Influenza Vaccination on Productivity	24
Modification of the Model for the High-Risk Population	26
Size of Vaccinated High-Risk Population	27
Alteration of Selected Characteristics Describing the High-Risk Population	27
Results	27
Modification of the Model for Medicare	29
APPENDIXES	
A. Relationship of Serum Antibody Concentration to Incidence of Influenza Illnesses	33
B. Safety and Efficacy of Inactivated Influenza Vaccine	36
C. Summary of Medical Literature Review of Effectiveness of Inactivated Influenza Virus Vaccines	43
D. A Description of the Guillain-Barré Syndrome Due to Influenza Vaccine	46
E. Values Assigned to Selected Variables	49
F. Acknowledgments	60
References	63

LIST OF TABLES

Table No.	Page
1. Size of General and High-Risk Populations Vaccinated With Influenza Vaccine, 1970-71 Through 1977-78.	14
2. Percentage of General and High-Risk Populations Vaccinated With Influenza Vaccine, 1970-71 Through 1977-78.	14
3. Assumptions Employed in Both the Base Case and Sensitivity Analysis.	19
4. Values Assigned to Uncertain Variables in the Base Case and Sensitivity Analysis.	20
5. Base Case Analysis: Per Vaccination Cost Effectiveness of Annual Influenza Vaccination, 1971-72 Through 1977-78.	20
6. Base Case Analysis: Cumulative Population Costs and Health Effects of Annual Influenza Vaccination, 1971-72 Through 1977-78.	22
7. Sensitivity Analysis: Per Vaccination Cost Effectiveness of Annual Influenza Vaccination, 1971-72 Through 1977-78.	23
8. Self-Reported Excess Work Loss Related to Medically Attended Influenza, 1971-72 Through 1977-78.	24
9. Productivity Loss Related to Self-Reported Excess Work Loss From Medically Attended Influenza, 1971-72 Through 1977-78.	25
10. Base Case Analysis: Effects of Vaccination on Reduction in Work Loss and Productivity Loss From Influenza, 1971-72 Through 1977-78.	26
11. Base Case Analysis: Effects of Vaccination on Reduction in Housekeeping Loss and Imputed Productivity Loss Related to Influenza, 1971-72 Through 1977-78.	26
12. Size and Percent of High-Risk Population 20 Years and Older Vaccinated During Fiscal Years 1973-78.	28
13. Per Vaccination Cost-Effectiveness Ratios for Annual Influenza Vaccination Among High-Risk Persons Compared to Ratios Among the General Population, 1971-72 Through 1977-78.	29
14. Effect on Medicare Costs of Annual Influenza Vaccination for Persons 65 Years and Older, 1971-72 Through 1977-78.	29
E-1. Price per Dose of Influenza Vaccines Paid by Selected Purchasers, 1977-78 Through 1980-81.	50
E-2. Guillain-Barre Syndrome Among 1976-77 A/New Jersey Influenza Vaccines.	51
E-3. Excess Mortality From All Causes Reported During Influenza Epidemics, 1970-71 Through 1977-78: Used in Base Case Analysis.	53
E-4. Estimated (Expected) Mortality From All Causes Reported During Influenza Epidemics, 1970-71 Through 1977-78: Used in Base Case Analysis.	54
E-5. Excess Mortality From All Causes Reported During Influenza Epidemics, 1970-71 Through 1977-78: Used in Sensitivity Analysis.	54
E-6. Estimated (Expected) Mortality From All Causes Reported During Influenza Epidemics, 1970-71 Through 1977-78: Used in Sensitivity Analysis.	54
E-7. Annual Individual Mean Earnings for Full-Time, Year-Round Workers, by Age and Sex, 1977-78.	55
E-8. Data Relating to Pneumonia Deaths in the 1950's, by Age Group.	56
E-9. Age-Specific Death Rates From Pneumonia in the 1950's, by Age Group.	56
E-10. Probabilities of Dying From Pneumonia in the 1950's, by Age Group.	57
E-11. Increased Probability of a High-Risk Person's Being Hospitalized for Pneumonia or Influenza During an Influenza Epidemic.	57
E-12. Average Length of Stay for a Hospital Case of Pneumonia Among Persons With One or More High-Risk Conditions, 1976.	58
E-13. Disability Days Caused by Selected High-Risk Conditions.	58
