SAS to Stata

To go from SAS to Stata the easiest way is to use Stat/Transfer, see here:

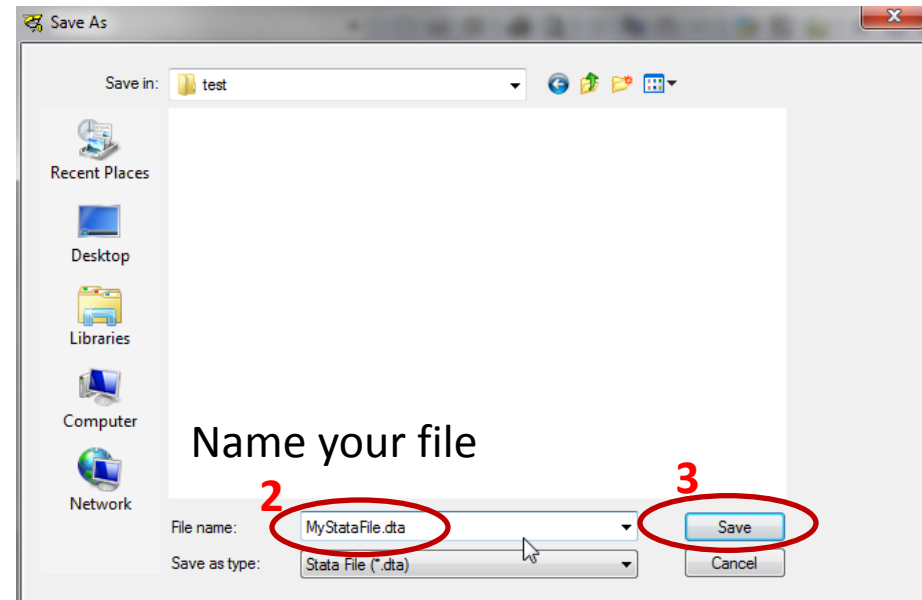

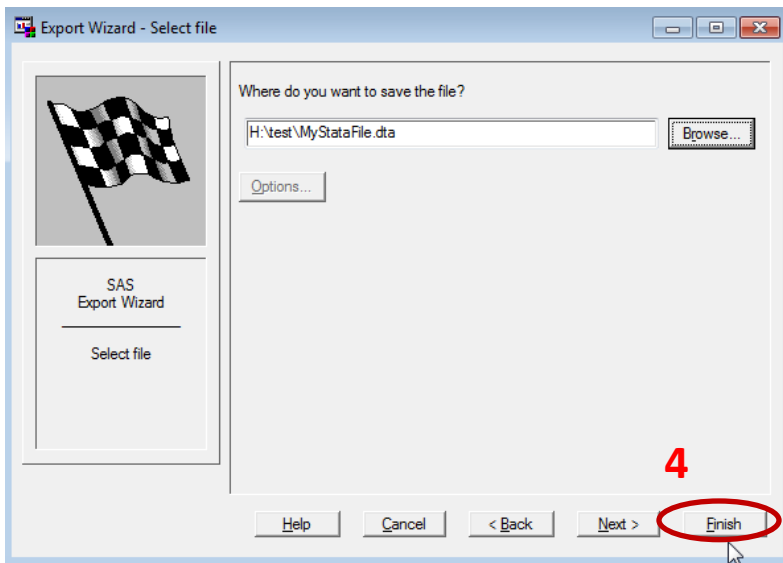

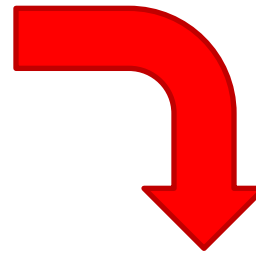

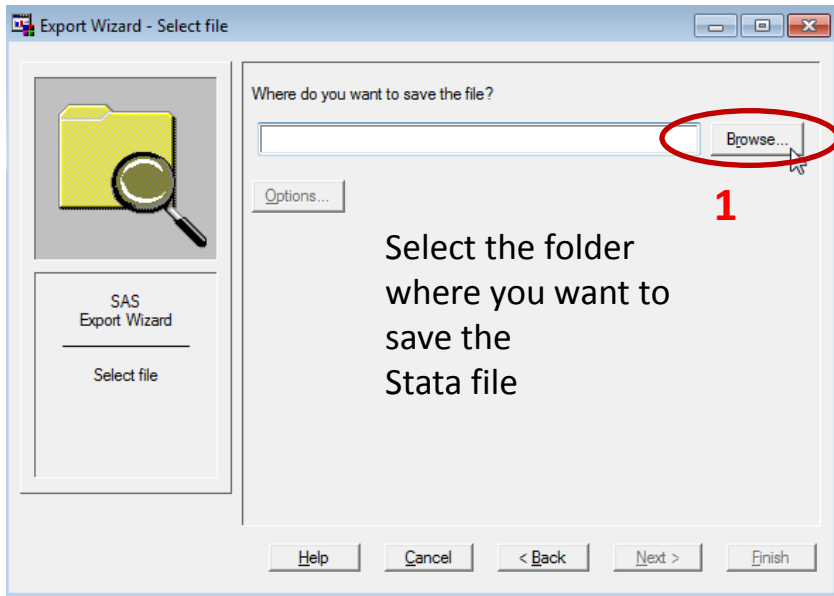

<http://dss.princeton.edu/training/StatTransfer.pdf>

For the very rare cases in which Stat/Transfer won't work or if you have SAS but not Stat/Transfer, then you can export the data directly from SAS, see next slide

Once the data is loaded in SAS...

Done! The Stata version of your SAS file is saved in the selected folder
