### **Working Papers and Manuscripts**

“Talking About Killing: Cell Phones, Collective Action, and Insurgent Violence in Iraq.” – With Nils B. Weidmann. This paper analyzes the impact of expanding cellular communications opportunities on insurgent violence. Drawing on data on Iraq’s cell phone network and event data on violence, we exploit exogenous variation in the timing of tower introduction and the limited geographic range of coverage to identify the impact of mobile communications. We find that increased coverage seems to increase information flow from the population to the military, reducing insurgent violence.

“Insurgent Math: The Impact of Civilian Casualties on the Afghan Insurgency.” Revision of NBER Working Paper 16152 – With Luke N. Condra, Joseph H. Felter, and Radha K. Iyengar. This paper focuses on the reaction to civilian casualties in Afghanistan, using a series of analytic comparisons to distinguish between four prominent theories on the how civilian casualties may affect violence: revenge, recruitment, population-provided information, and the mechanical correlation between civilian casualties and insurgent group capacity. We find strong evidence of a localized revenge effect in Pashtun areas, suggesting insurgents’ mobilizing tools may be quite region-specific.

“Democratic Values and Support for Militancy: Evidence From a National Survey of Pakistan.” – With C. Christine Fair and Neil Malhotra. This paper uses a nationally-representative survey in Pakistan ( $n = 6,000$ ) to study the relationship between support for democratic values, and support for four distinct militant organizations. We employ an endorsement experiment to measure support, thereby mitigating concerns about social-desirability and non-response bias when asking a set of very sensitive political questions.

“Poverty and Support for Militant Politics: Evidence from Pakistan.” – With Graeme Blair, C. Christine Fair, and Neil Malhotra. This paper uses a nationally-representative survey in Pakistan ( $n = 6,000$ ) to study the relationship between income and support for four distinct militant organizations. We find that, poor Pakistanis dislike militant groups more than middle-class citizens and that this dislike is strongest among poor urban residents, suggesting that the negative relationship stems from exposure to the externalities of terrorist attacks.

“Measuring Political Support and Issue Ownership Using Endorsement Experiments, with Application to Militant Groups in Pakistan.” With Will Bullock and Kosuke Imai. This paper develops a Bayesian hierarchical measurement model for analyzing

endorsement experiments, demonstrates its statistical properties through simulations, and use it to measure support for Islamist militant groups in Pakistan. We find that citizens' attitudes towards militant groups are geographically clustered, that once these regional differences are taken into account respondents' characteristics have little predictive power, that militant groups tend to receive less support in the areas where they operate. (Conditional acceptance, *Political Analysis*)

"Do International Legal Norms Affect Citizens' Willingness to Punish Foreign Human Rights Violations?" – With Tonya Putnam. This paper uses a survey experiment to assess whether international human rights treaties make a difference to the willingness of citizens in established democracies to punish the human rights violations of foreign governments.

"Bureaucracy and Control in Terrorist Organizations." This paper models the challenge of organizing terrorism as an agency problem where principals are better informed than agents about the mapping from policies to outcomes, but sharing information to help agents achieve better outcomes is costly. This approach explains why terrorist groups so often employ traditional mechanisms of bureaucratic control.

"The Terrorist's Dilemma." This book manuscript studies the core organizational challenges terrorists have faced from the 1880s through the present. Using agency theory and a broad range of historical and primary source evidence the manuscript shows that terrorists face a fundamental tradeoff between operational security and organizational control. The findings have strong implications for counterterrorism and also suggest the potential of networked, non-hierarchical movements to effect massive political change has been overstated.
