Summary	3
Introduction	4
Background: Cervical Cancer	5
Disease Etiology	5
Incidence	6
Detection	7
Cost-Effective Detection	10
Methodology	11
Disease Transition Probability	11
Screening Policies	12
costs	13
Benefits	14
Policy Analysis	14
Sensitivity Analysis	15
Results	15
Benefits and Costs	15
Discount Rate Sensitivity	17
Pap Test Error Rate Sensitivity	17
Joint Production Effects	17
Migration Effects	18
Low-Cost Model	18
High-Risk, High-Cost Finding-Cost Population	18
Discussion	19
Limitations	22
Disease Transition	22
Screening and Treatment	22
Costs	23
Benefits	23
Summary	24
conclusions	24
Appendix A, -Glossary of Terms	27
Appendix B. —Health State Vectors for Screening Policies	27
Appendix C. -Cost Formulations	28
Appendix D. —Values for Base Case Analysis	29
References	30

LIST OF TABLES

Table No.	page
1. Progressive Stages of Cervical Cancer	5
2. Annual Incidence of Carcinoma In Situ	7
3. Annual Incidence of Invasive Carcinoma	7
4. Sample Disease Progression Chart	12
5. Benefits and Costs	15
6. Cost-Effectiveness Ratios for Society	16
7. Cost-Effectiveness Ratios for Philanthropic Organizations	17
8. Discount Rate Sensitivity: Total Cost Per Year of Life Saved	17
9. Pap Test Error Rate Sensitivity: Total Cost per Year of Life Saved	19
10. Joint Production Effects	19
11. Migration Effects	21
12. Cost-Effectiveness Ratios for Society: Low-Cost Model	21
13. Cost-Effectiveness Ratios for Philanthropic Organizations: Low-Cost Model	21
14. Cost-Effectiveness Comparisons: High-Cost Low-Cost and High-Risk Models	21

LIST OF FIGURES

Figure No.	Page
1. Decision Tree for Cervical Cancer Screening and Treatment	8
2. Decision Tree for Cervical Screening and Treatment (simplified for analysis)	13
3. Benefits: Lives Saved and Years of Life Saved	15
4. Total Costs	16
5. Cost-Effectiveness Ratios for Society	16
6. Discount Rate Sensitivity: Total Cost per Year of Life Saved	18
7. Joint Production Effect 5: Total Cost per Year of Life Saved	20
