

Contents

	Page
Summary	1
Background	3
Concept of Degree of Hazard	8
Technical Basis	8
Degree of Hazard Concept v. Hazard Classification.	10
Objective and Purpose of a Classification System.	10
Economic Effectiveness	12
Uncertainties in Implementation.	13
Degree of Hazard in the Current Regulatory Approach	14
Methods for Classifying Waste and Facilities by Degree of Hazard.	17
Classification Using Technical Criteria.	17
Rank-Order Classifications	22
Multiple Discriminators.	24
Classification by Environmental Containment.	24
Unresolved Questions	27
Conclusion	31
Appendix: Dangerous Waste Criteria for the State of Washington	33
References	35

List of Tables

Table No.	Page
1. Toxic Doses for Selected Hazardous Waste Constituents	9
2. Selected Examples of a Degree-of-Hazard Interpretation in Current RCRA Regulations.	15
3. Toxicity Criteria in the California System of Degree-of-Hazard Classification.	18
4. Criteria for the Texas System of Degree-of-Hazard Classification.	19
5. Criteria for the Washington System of Degree-of-Hazard Classification.	20
6. Proposed Technical Criteria for Classifying Nonnuclear Industrial Hazardous Waste.	21
7. Comparison of Proposed Degree-of-Hazard Classification Systems.	21
8. Michigan's System for Rank-Order Assessment of Critical Materials.	23
9. Suggested Effect and Exposure Factors.	23
10. Suggested Environmental Parameters for Classifying Facility Sites.	25
11. Potential Classification Scheme Based on Containment and Destruction.	26
A-1. Toxic Category	33

List of Figures

Figure No.	Page
1. Information and Decision Flow for Current and Alternative Waste Management	7
2. Factors of Importance to Degree-of-Hazard Assessments	8
3. Decision Analysis Illustrating the Impact of Degree of Hazard on the Choice of Management Practice.	12
4. Research, Development, and Analysis Requirements and Possible Benefits of Implementation of a Hazard Classification System.	32
A-I Toxic Dangerous Waste Mixtures.	34
