Contents

Summary .................................................. 3
Cardiac Radionuclide Imaging—A New Technology in Need of Scrutiny .......................... 4
The Technology—Past, Present, and Future ............ 5
  Past .................................................. 5
  Present .............................................. 5
  Future ............................................. 10
The Market ........................................... 12
  The Industry ..................................... 12
  The Producers .................................... 13
Users and Uses ........................................ 15
  Data Sources .................................... 15
  Users ............................................. 15
  Classification ................................... 15
  Potential Target Populations for Cardiac Imaging 17
  Potential Demand for Cardiac Imaging ............. 18
Costs and Charges .................................... 19
  Costs of a Radionuclide Laboratory ................ 19
  Unit Costs of Cardiac Imaging Procedures ........ 23
  Current Charges for Cardiac Imaging Procedures 25
Clinical Efficacy ....................................... 27
  Medical Literature: Overview ..................... 27
  Diagnostic Information ........................... 28
  Cardiac Imaging Procedures: Review of the Medical Literature .......................... 30
  Technical Challenges and Interobserver Variability 37
  Potential Risks From Cardiac Imaging ............. 37
Cost-Effectiveness Analysis .......................... 39
  Framework for Analysis .......................... 39
  Cost Effectiveness of Cardiac Radionuclide Imaging 41
Policy Implications .................................... 47
Appendix A.—Glossary of Terms ........................ 48
Appendix B.—Manufacturers of Cardiac Radionuclide Imaging Equipment and Supplies 49
References ............................................. 56

LIST OF TABLES

Table No. Page
1. Cardiac Radionuclide Imaging Techniques ............ 7
2. Estimated Markets for Nuclear Imaging Equipment 12
3. Ranks and Market Shares of Producers of Nuclear Imaging Equipment .............. 14
4. Clinical Indications for Cardiac Radionuclide Imaging ........................................ 16
5. Deaths From Coronary Artery Disease, 1970-77 .......... 17
6. Death Rates From Coronary Artery Disease, 1970-77 ........................................... 17
7. Prevalence and Morbidity Data for Coronary Artery Disease, 1972 .......................... 18
8. Hospital Discharges for Coronary Artery Disease, 1969-77 .................................. 18
9. Projected 'Demand' for Cardiac Imaging ............. 19
10. List Prices of Selected Equipment Suitable for Cardiac Radionuclide Imaging .......... 20
11. Estimated Annual Fixed Costs of Operating a Radionuclide Imaging Laboratory ... 21
12. List Prices of Radionuclides and Cold Product Kits ............................................ 22
13. Production Capacity for Cardiac Imaging Procedures ............................................. 23
14. Personnel Time Required for Different Cardiac Imaging Procedures and Estimated Cost Equivalents ........................................ 24
15. Unit Costs of Cardiac Imaging Procedures Assuming Maximal Production Efficiency 24
16. Suggested Fee Schedules for Cardiac Imaging Procedures ...................................... 26
17. Break-even Points for Laboratory Operation .......... 26
18. Thallium-201 Perfusion Scans in the Diagnosis of Coronary Artery Disease .......... 32
19. Technetium-99m Radionuclide Angiography in the Diagnosis of Coronary Artery Disease 33
20. Technetium-99m Stannous Pyrophosphate and Thallium-201 Perfusion Scans in the Diagnosis of Acute Myocardial Infarction 35
21. Thallium-201 Perfusion Scans in the Evaluation of Coronary Artery Bypass Surgery Results 36
22. Technetium-99m Pyrophosphate Scans in Patients Who Have Had Coronary Artery Bypass Surgery ........................................ 37
23. Radiation Exposure From Cardiac Radionuclide Imaging and Selected Radiodiagnostic Procedures 38
24. Effectiveness of Alternative Strategies To Diagnose Surgically Treatable Coronary Artery Disease ........................................ 43
25. Costs of Alternative Strategies to Diagnose Surgically Treatable Coronary Disease 44
26. Costs and Effectiveness of Alternative Strategies To Diagnose Surgically Treatable Coronary Disease 44
27. Cost Effectiveness of Alternative Diagnostic Strategies ........................................ 45
28. Cost-Effectiveness Comparisons Between Alternative Diagnostic Strategies .......... 45
29. Costs and Effectiveness of Alternative Strategies Employing Cardiac Imaging and Exercise Tolerance Testing To Diagnose Surgically Treatable Coronary Artery Disease ........................................ 46
30. Cost-Effectiveness Comparisons Across Population Subgroups ................................ 46
